| Leicester*   | 21·0         | 22·8        | 13·9         | 22·8         | Wolverhampton -    | 14·7         | 15·3        | 13·4         | 14·7         |

The highest annual death-rates, measured by last week's mortality, were:—from *scarlet fever*, 1·3 in Blackburn; from *whooping-cough*, 1·7 in Norwich; from *diarrhœa*, 3·8 in Cardiff, 4·1 in Bolton, 4·9 in Sheffield, 5·0 in Leicester, and 8·6 in Preston; and from "*fever*," 1·0 in Cardiff. The death-rate from *measles* did not reach 1·0 per 1000 in any of the twenty-eight towns. The 29 deaths from *diphtheria* in these towns included 24 in London, and 2 in Manchester. *Small-pox* caused one death in Hull, but not one in London, or in any of the twenty-six other great towns.

## LONDON.

In LONDON† 2463 BIRTHS and 1298 DEATHS were registered. Allowing for increase of population, the births were 248, and the deaths 109, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 16·0 and 16·2 in the two preceding weeks, declined last week to 15·8, a lower rate than has prevailed in any week since the third of July last. During the twelve weeks ending on Saturday last, the death-rate averaged 16·2 per 1000, and was 3·6 below the mean rate in the corresponding periods of the ten years 1878–87.

The 1298 deaths included 32 from *measles*, 20 from *scarlet fever*, 24 from *diphtheria*, 22 from *whooping-cough*, 11 from *enteric fever*, 78 from *diarrhœa* and

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last inter-censal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edinonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

dysentery, and 4 from cholera and choleraic diarrhœa; thus, 191 deaths were referred to these diseases, being 39 below the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 5; no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, on Saturday last. The death of an infant aged one year in Marylebone was attributed to "varicella, followed by pneumonia, 11 weeks." The fatal cases of *measles*, which had been 26 and 27 in the two previous weeks, further rose last week to 32, and were double the corrected average; 6 belonged to Marylebone, 3 to Chelsea, 3 to Mile End Old Town, 4 to Poplar, and 3 to Wandsworth sanitary areas. The 20 fatal cases of *scarlet fever* showed a decline of 4 from the number in the previous week, and were 22 below the corrected average; 2 belonged to St. James (Westminster), 2 to Pancras, 4 to Bethnal Green, and 2 to Mile End Old Town sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 850 scarlet fever patients, against numbers increasing from 774 to 826 in the four preceding weeks; 115 cases were admitted during the week, against 79 and 93 in the two previous weeks. The 24 fatal cases of *diphtheria* showed an increase of 6 upon the number returned in each of the two preceding weeks, and exceeded the corrected average by 5; 3 belonged to Kensington, 3 to Hammersmith, 2 to St. George Hanover Square, 3 (at 47, Euston Buildings) to Pancras, 3 to Bethnal Green, 2 (admitted to hospital from 3, Havering Street) to Stepney, and 2 to Lambeth. The 22 deaths from *whooping-cough* were fewer by 9 than the number in the previous week, and were 10 below the corrected average; 3 belonged to Islington, and 3 to Lambeth sanitary areas. The deaths attributed to *diarrhœa* and *dysentery*, which had been 192, 144, 131, and 122 in the four preceding weeks, further declined last week to 78, and were 11 below the corrected average; 75 were of children under five years of age, including 60 of infants under one year of age, and the remaining 3 were of persons aged upwards of 60 years. The deaths of four infants were referred to *infantile cholera* and *choleraic diarrhœa*.

The deaths referred to *enteric fever*, which had increased in the five preceding weeks from 2 to 12, were last week 11, and were 12 below the corrected average; 2 belonged to Clerkenwell sanitary area. The Metropolitan Asylum Hospitals contained 82 cases of enteric fever, and one of typhus, on Saturday last; 14 cases of enteric fever were admitted during the week, against 7, 10, and 11 in the three previous weeks.

The deaths referred to diseases of the respiratory organs, which had been 130, 148, and 184 in the three preceding weeks, declined last week to 179, and were 21 below the corrected average.

Different forms of violence caused 69 deaths; 59 were the result of negligence or accident, among which were 27 from fractures and contusions, 6 from burns and scalds, 9 from drowning, and 9 of infants under one year of age from suffocation. The 27 deaths from fractures and contusions were thus caused:—6 by accidents from vehicles in street; 3 by accidents on railway; 3 by fall from house; 1 by fall from scaffold; 1 by fall from window; 2 by fall from ladder; 1 by fall down stairs; 1 by fall in street; 1 by fall into area; 1 by fall through stage; 3 by fall, the nature of which was not stated; 1 by kick from horse; 1 by injuries received from falling plank; and 2 by fracture, the cause of which was not stated. An inquest was held in each case except the last two. Nine cases of suicide were registered, the corrected average being 7.

#### GREATER LONDON.

In Greater London 3247 births and 1629 deaths were registered, corresponding to annual rates of 30·6 and 15·4 per 1000 of the estimated population. In the Outer Ring 30 deaths from diarrhœa, 8 from diphtheria, and 7 from whooping-cough, were registered. The deaths from diarrhœa included 4 in West Ham, 3 in Croydon, 3 in Brentford, and 3 in Walthamstow sub-districts. Of the 8 fatal cases of diphtheria, 3 occurred in Edmonton, and 2 in West Ham registration districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 30·06 ins.; the lowest reading was 29·95 ins. at the beginning of the week, and the highest was 30·12 ins. on Wednesday morning. The mean temperature of the *air* was 57°·2, and 0°·4 above the average in the corresponding weeks of the 20 years ending 1868. The mean was slightly below the average on Tuesday, and showed a small excess on each of the other days of the week. The general direction of the *wind* was N.E., and the horizontal movement of the air averaged 8·8 miles per hour, which was 2·5 miles below the average in the corresponding weeks of 16 years. No rain was measured during the week. The duration of registered bright sunshine in the week was 32·6 hours, against 49·0 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylum Hospitals, outside Registration London (see Table 5).

\* The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.046 per cent. for increase of population.

† As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

‡ These cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."

§ The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, during the Week ending

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; &c.—A Workhouse Establishment receiving inmates from other Districts than that in which it stands; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N.R., New River; E.L., East London and K., the Kent Company.

TER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
Friday, the 22nd September, 1888.

The height of the cistern of the barometer is 150 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1875 for the barometer, and during the twenty years ending 1885 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers at the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Castle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - *L*, positive; *N*, negative; *w*, weak; *m*, moderate; *s*, strong; and *v*, variable.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the approximate duration of bright sunshine on each day.

The result of all the meteorological observations are to be understood as applying to the civil day, from midnight to midnight.

The reading of the barometer increased from 29.02 in. at the beginning of the week to 30.13 in. by 8h. A.M. on the 22nd; decreased to 30.00 in. by 3h. P.M. on the 21st; increased to 30.06 in. by 4h. A.M. on the 22nd; and was 30.02 in. at the end of the week.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

*Printed under the Superintendence of Her Majesty's Stationery Office,*  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 39. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, SEPTEMBER 29. [Price 1½d.

General Register Office, Somerset House,  
1st October, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 18·3 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

The highest annual death-rates, measured by last week's mortality, were:—from *measles*, 1·3 in Blackburn; from *scarlet fever*, 1·8 in Blackburn; from *whooping-cough*, 1·0 in Cardiff, 1·1 in Norwich, and 1·3 in Halifax; from "*fever*," 1·4 in Salford; and from *diarrhœa*, 4·1 in Bolton, 4·5 in Sheffield, 6·1 in Norwich, 6·6 in Preston, and 8·2 in Portsmouth. The 36 deaths from *diphtheria* in these towns included 27 in London, 3 in Manchester, and 2 in Bristol. *Small-pox* caused one death in Hull, but not one in London, or in any of the twenty-six other great towns.

## LONDON.

In LONDON† 2395 BIRTHS and 1314 DEATHS were registered. Allowing for increase of population, the births were 325, and the deaths 94, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 16·2 and 15·8 in the two preceding weeks, rose again last week to 16·0. During the thirteen weeks ending on Saturday last, the death-rate averaged 16·2 per 1000, and was 3·4 below the mean rate in the corresponding periods of the ten years 1878-87.

The 1314 deaths included 30 from measles, 22 from scarlet fever, 27 from diphtheria, 13 from whooping-cough, 13 from enteric fever, 77 from diarrhœa and

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

dysentery, and not one from small-pox, typhus, ill-defined forms of continued fever, or cholera; thus, 182 deaths were referred to these diseases, being 34 below the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 5; no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, on Saturday last. The fatal cases of *measles*, which had been 26, 27, and 32 in the three preceding weeks, were last week 30, and exceeded the corrected average by 12; 3 belonged to Hammersmith, 7 to Pancras, and 5 to Stepney sanitary areas. The 22 fatal cases of *scarlet fever* showed an increase of 2 upon the number in the previous week, but were less than half the corrected average; 2 belonged to Islington, 4 to Hackney, 2 to Bethnal Green, 2 to Mile End Old Town, and 4 to Poplar sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 916 scarlet fever patients, against numbers increasing from 774 to 850 in the five preceding weeks; 132 cases were admitted during the week, against 79, 93, and 115 in the three previous weeks. The 27 fatal cases of *diphtheria* showed a further increase of 3 upon recent weekly numbers, and exceeded the corrected average by 8; 4 belonged to Kensington, 2 to Pancras, 2 to Whitechapel, 2 to Lambeth, and 2 to Lewisham sanitary areas. The 13 deaths from *whooping-cough* showed a further considerable decline from the numbers in recent weeks, and were 15 below the corrected average; 2 belonged to Pancras, and 2 to Camberwell sanitary areas. The deaths attributed to *diarrhœa* and *dysentery*, which had declined in the five preceding weeks from 192 to 78, were last week 77, and exceeded the corrected average by 5; 74 were of children under five years of age, including 61 of infants under one year of age.

The deaths referred to *enteric fever*, which had been 12 and 11 in the two preceding weeks, were last week 13, and were 11 below the corrected average; 2 belonged to Pancras, and 2 to Camberwell sanitary areas. The Metropolitan Asylum Hospitals contained 81 cases of enteric fever, and one of typhus, on Saturday last; 3 cases of enteric fever were admitted during the week, against numbers increasing from 7 to 14 in the four preceding weeks.

The deaths referred to diseases of the respiratory organs, which had been 184 and 179 in the two preceding weeks, rose last week to 213, but were 11 below the corrected average.

Different forms of violence caused 61 deaths; 44 were the result of negligence or accident, among which were 21 from fractures and contusions, 2 from burns and scalds, 7 from drowning, 2 from poison, and 9 of infants under one year of age from suffocation. The 21 deaths from fractures and contusions were thus caused:—5 by accidents from horses or vehicles in street; 3 by fall down stairs or steps; 1 by fall from roof; 1 by fall from load of straw; 1 by fall from bed; 1 by fall against a chest of drawers; 2 by fall, the nature of which was not stated; 1 by blow given by a person in self-defence; 1 by injuries from machinery; 2 by injuries from fall of dock bucket; 1 by injuries from fall of log; and 2 by fracture, the cause of which was not stated. An inquest was held in each case except one of the two last-mentioned. Thirteen cases of suicide were registered, exceeding the corrected average by 6.

The widow of a seaman died on 24th instant in Commercial Road, Mile End Old Town, whose age was stated to be 101 years.

#### GREATER LONDON.

In Greater London 3158 births and 1634 deaths were registered, corresponding to annual rates of 29·8 and 15·4 per 1000 of the estimated population. In the Outer Ring 14 deaths from *diarrhœa*, 7 from *diphtheria*, and 6 from scarlet fever, were registered. The deaths from *diarrhœa* included 3 in West Ham, 3 in Croydon, and 2 in Tottenham sub-districts. Three fatal cases of scarlet fever occurred in West Ham, and 3 of *diphtheria* in Walthamstow sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·86 ins.; the highest reading was 30·09 ins. on Wednesday evening, and the lowest 29·39 ins. at the end of the week. The mean temperature of the *air* was 55°·8, and 0°·2 above the average in the corresponding weeks of the 20 years ending 1868. The mean showed an excess on Monday, Friday, and Saturday, but was below the average on each of the other days of the week. The general direction of the *wind* was N.E., and the horizontal movement of the *air* averaged 7·4 miles per hour, which was 3·3 miles below the average in the corresponding weeks of 16 years. *Rain* fell on four days of the week to the aggregate amount of 0·51 of an inch. The duration of registered bright sunshine in the week was 12·7 hours, against 21·2 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospitals, outside Registration London (see Table 5).

The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.046 per cent. for increase of population.

As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

\* These cases of small-pox only are returned as "vaccinated," or as "unvaccinated," which are so certified by registered medical men. When attention, the case is returned under the heading "no statement."

† The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, slaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, DYPHTHERIA, ENTERIC (or TYPHOID) FEVER, SIMPLE CONTINUED FEVER, DIARRHŒA, VIOLENCE, INQUEST CASES, and Deaths in Public Institutions, during the Week ending

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it stands; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., the Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N.R., New River; E.L., East London and K., the Kent Company.

DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
on the 29th September, 1888.

| Leicester*   | 13·9         | 22·8         | 19·6         | 18·1       | Wolverhampton -    | 13·4         | 14·7         | 19·8         | 13·4       |

The highest annual death-rates, measured by last week's mortality, were:—from *scarlet fever*, 1·8 in Bolton, and 3·5 in Blackburn; from *whooping-cough*, 1·1 in Norwich; from "*fever*," 1·2 in Salford, and 1·4 in Cardiff; and from *diarrhœa*, 3·2 in Leicester, 3·6 in Sheffield, 4·6 in Bolton, 4·9 in Portsmouth, 5·1 in Wolverhampton, and 6·1 in Preston. The death-rate from *measles* did not reach 1·0 per 1000 in any of the twenty-eight towns. The 47 deaths from *diphtheria* in these towns included 35 in London, 5 in Manchester, and 2 in Birmingham. *Small-pox* did not cause a single death in any of the twenty-eight great towns.

## LONDON.

In LONDON† 2413 BIRTHS and 1352 DEATHS were registered. Allowing for increase of population, the births were 300, and the deaths 106, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 15·8 and 16·0 in the two preceding weeks, further rose last week to 16·5. During the thirteen weeks of last quarter the death-rate averaged 16·2 per 1000, and was 3·4 below the mean rate in the corresponding periods of the ten years 1878–87.

The 1352 deaths included 39 from measles, 24 from scarlet fever, 35 from diphtheria, 5 from whooping-cough, 1 from typhus, 8 from enteric fever, 72 from

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

diarrhœa and dysentery, and not one from small-pox, ill-defined forms of continued fever, or cholera; thus, 184 deaths were referred to these diseases, being 21 below the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 5; no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, on Saturday last. The death of a child aged 17 months, in Newington, was attributed to "chicken-pox, bronchitis, and quinsy." The fatal cases of *measles*, which had been 32 and 30 in the two preceding weeks, rose last week to 39, and exceeded the corrected average by 20; 3 belonged to Fulham, 3 to Marylebone, 8 to Pancras, 3 to Islington, and 5 to Stepney sanitary areas. The 24 fatal cases of *scarlet fever* showed a further increase of 2 upon the numbers in the two preceding weeks, but were 27 below the corrected average; 3 belonged to Pancras, 2 to Islington, 5 to Bethnal Green, 2 to St. George Southwark, and 3 to Camberwell sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 921 scarlet fever patients, against numbers increasing from 774 to 916 in the six preceding weeks; 92 cases were admitted during the week, against numbers increasing from 79 to 132 in the four previous weeks. The 35 fatal cases of *diphtheria* showed a further increase upon recent weekly numbers, were 15 above the corrected average, and exceeded the number returned in any week since February last; 5 belonged to Westminster, 3 to Kensington, 2 to Paddington, 2 to Hammersmith, 2 to Marylebone, 2 to Bethnal Green, and 2 to Newington sanitary areas. The 5 deaths from *whooping-cough* were considerably fewer than in any previous week of this year, and were 23 below the corrected average. The deaths attributed to *diarrhœa* and *dysentery*, which had declined in the six preceding weeks from 192 to 77, further declined last week to 72, but exceeded the corrected average by 20; 67 were of children under five years of age, including 52 of infants under one year of age, and 5 were of persons aged upwards of 60 years.

The deaths referred to *enteric fever*, which had been 11 and 13 in the two preceding weeks, declined last week to 8, and were 17 below the corrected average. The Metropolitan Asylum Hospitals contained 75 cases of enteric fever, and one of typhus, on Saturday last; 5 cases of enteric fever were admitted during the week, against 14 and 3 in the two preceding weeks.

The deaths referred to diseases of the respiratory organs, which had increased in the five preceding weeks from 130 to 213, further rose last week to 239, but were 11 below the corrected average.

Different forms of violence caused 51 deaths; 40 were the result of negligence or accident, among which were 18 from fractures and contusions, 5 from burns and scalds, 4 from drowning, 2 (of a house painter and of a barman) from lead-poisoning, and 8 of infants under one year of age from suffocation. The 18 deaths from fractures and contusions were thus caused:—3 by accidents from vehicles in street; 4 by fall down stairs; 4 by fall in street; 1 by fall from ladder; 1 by fall from scaffold; 1 by fall on steamship; 1 by fall from rigging; 1 by fall from steamer into barge; 1 by fall from swing boat; and 1 by fall, the nature of which was not stated. An inquest was held in each of these 18 cases. Eight cases of suicide were registered, the corrected average being 6.

#### GREATER LONDON.

In Greater London 3190 births and 1680 deaths were registered, corresponding to annual rates of 30·1 and 15·9 per 1000 of the estimated population. In the Outer Ring 23 deaths from diarrhœa, 7 from "fever," 7 from whooping-cough, 6 from diphtheria, and 6 from measles were registered. The deaths from diarrhœa included 5 in West Ham, 4 in Croydon, and 3 in Walthamstow sub-districts. The 20 deaths in Tottenham sub-district included 3 from "fever," and 3 from whooping-cough. Three fatal cases of measles occurred in Epsom, and 2 of diphtheria both in Godstone and in Walthamstow sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·44 ins.; the lowest reading was 29·09 ins. on Tuesday afternoon, and the highest 29·83 ins. at the end of the week. The mean temperature of the *air* was 42°·7, and no less than 11°·3 below the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably below the average throughout the week; the coldest day was Tuesday, when the mean was only 39°·8, and was 14°·6 below the average. The direction of the *wind* was variable, and the horizontal movement of the *air* averaged 10·4 miles per hour, which was 0·1 of a mile above the average in the corresponding weeks of 16 years. *Rain* fell on two days of the week to the aggregate amount of 0·11 of an inch. The duration of registered bright sunshine in the week was 33·0 hours, against 39·1 hours at Glynde Place, Lewes.

Note.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospital, outside Registration (see Table 5).

\* The numbers in this column are the average weekly Deaths for the ten years 1878-87, raised by 9.04 per cent. for increase of population.

† As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

These cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When a medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical attendant, the case is returned under the heading "no statement."

The evidence as to inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, DIPHTERIA, WHOOPING-COUGH, TYPHUS, ENTERIC (or TYPHOID) FEVER, SIMILE CONTINUED FEVER, DIARRHOEA, VIOLENCE, INQUEST CASES, and Deaths in Public Institutions, during the Week ending

| The DEATHS registered in the Week include                                   |   |                                     |                                     |                                 |                                     |             |          |                |             |                 |         |                                |                              |            |           |    |     |                |                                   |

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it is situated; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., the Grand Junction Company; W.M. West Middlesex; C. Chelsea; S. Southwark and Vauxhall; L. Lambeth; N. R. New River; E. L. East London and K. the Kent Company.

ER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
 day, the 6th October, 1888.

The height of the cistern of the barometer is 159 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. a.m.; noon; 3h. p.m.; and 9h. p.m. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1888 for the thermometers. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1893, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.

The reading of the barometer increased from 29.39 in. at the beginning of the week to 29.68 in. by 8h. p.m. on the 30th of September; decreased to 29.09 in. p.m. on the 2nd of

# GENERAL REMARKS.

Fine. Partially cloudy till evening; cloudless at night.

Fine. The amount of cloud was small throughout. Slight hoar frost.

Foggy in morning; cloudy and showery till evening; cloudless at night, with hoar frost.

Hoar frost in morning; fine and partially cloudy till noon; overcast till night, then cloudless.

Fine in morning; generally cloudy afterwards. Showery at times.

Hoar frost in morning; cloudless till 10h. a.m.; partially cloudy with one or two light showers till evening; cloudless at night. A fine day.

Hoar frost and fog in morning; cloudy till evening; cloudless at night.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

| Hull -       | 15·0         | 16·2         | 19·6       | 21·7        | Sheffield -        | 24·7         | 25·0         | 22·9       | 23·4        |
| Leeds -      | 22·3         | 22·0         | 21·7       | 24·1        | Sunderland         | 21·8         | 16·2         | 17·0       | 24·9        |
| Leicester*   | 22·8         | 19·6         | 18·1       | 21·0        | Wolverhampton -    | 14·7         | 19·8         | 13·4       | 18·5        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·1 in Huddersfield; from *scarlet fever*, 3·1 in Blackburn; from *whooping-cough*, 1·1 in Derby and in Manchester, 2·4 in Cardiff, and 2·9 in Huddersfield; from "*fever*," 1·2 in Salford; and from *diarrhœa*, 2·8 in Norwich, 3·2 in Wolverhampton, 3·4 in Portsmouth, and 3·5 in Preston. The 45 deaths from *diphtheria* in the twenty-eight towns included 26 in London, 5 in Manchester, and 3 in Newcastle-upon-Tyne. The only death from *small-pox* in the twenty-eight towns occurred in Hull.

## LONDON.

In LONDON† 2588 BIRTHS and 1536 DEATHS were registered. Allowing for increase of population, the births were 122 below, while the deaths exceeded by 13, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 15·8, 16·0, and 16·5 in the three preceding weeks, further rose last week to 18·7.

The 1536 deaths included 50 from measles, 30 from scarlet fever, 26 from diphtheria, 18 from whooping-cough, 13 from enteric fever, 1 from an un-defined form of continued fever, 43 from diarrhœa and dysentery, 2 from cholera, and not

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

one from small-pox or from typhus; thus, 183 deaths were referred to these diseases, being 25 below the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 5. The fatal cases of *measles*, which had been 30 and 39 in the two preceding weeks, further rose last week to 50, and exceeded the corrected average by 25; 7 belonged to Marylebone, 7 to Stepney, 6 to Pancras, and 6 to Poplar sanitary areas. The 30 deaths from *scarlet fever* also showed a further increase upon recent weekly numbers, but were 23 below the corrected average; 5 belonged to Bethnal Green, 3 to Pancras, 3 to Camberwell, 2 to Clerkenwell, 2 to Mile End Old Town, and 2 to St. George Southwark sanitary areas. The deaths from *diphtheria*, which had been 27 and 35 in the two previous weeks, declined again to 26 last week; 3 belonged to Paddington and 3 to Westminster sanitary areas. The 18 deaths from *whooping-cough* showed an increase of 13 upon the exceptionally low number in the previous week, but were 9 below the corrected average. The deaths referred to *enteric fever*, which had been 13 and 8 in the two previous weeks, rose again last week to 13, but were 12 below the corrected average; 2 belonged to Fulham, 2 to Islington, and 2 to Wandsworth sanitary areas. The deaths attributed to *diarrhæa* and *dysentery*, which had declined in the seven preceding weeks from 192 to 72, further fell last week to 43, and were 5 below the corrected average. The deaths of 2 infants were referred to "*cholera infantum*."

DEATHS BELONGING TO THE SEVERAL SANITARY AREAS OF REGISTRATION LONDON registered in the 13 WEEKS ENDING ON 29TH SEPTEMBER, 1888.

In the above Table all deaths in Hospitals and in other Public Institutions within Registration London, as also 21 that occurred, outside that area, in the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals have been distributed to the sanitary areas

from which the deceased inmates were admitted. On the other hand the deaths of 278 non-residents who died in Public Institutions inside London have been excluded from the Table.

#### GREATER LONDON.

In Greater London 3438 births and 1896 deaths were registered, corresponding to annual rates of 32·4 and 17·9 per 1000 of the estimated population. In the Outer Ring 14 deaths from diarrhoea, 9 from measles, 8 from diphtheria, and 6 from scarlet fever, were registered. Of the fatal cases of diphtheria, 3 occurred in Croydon and 2 in Walthamstow sub-districts. The 6 deaths from scarlet fever included 3 in West Ham sub-district.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·89 ins. ; the highest reading was 30·04 ins. on Monday morning, and the lowest 29·70 ins. on Saturday morning. The mean temperature of the *air* was 45°·0, and 7°·2 below the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably below the average throughout the week, the coldest days being Sunday and Monday. The direction of the *wind* was variable and the horizontal movement of the air averaged 9·3 miles per hour, which was 0·9 of a mile below the average in the corresponding weeks of 16 years. *Rain* fell on Friday, to the amount of 0·02 of an inch. The duration of registered bright sunshine in the week was 24·6 hours, against 34·8 hours at Glynde Place, Lewes.

THE REGISTRAR GENERAL has to acknowledge the courtesy of the LONDON WATER COMPANIES who have furnished him with the average daily quantity of Water supplied during the month of SEPTEMBER 1888 ; according to their returns 168,890,449 gallons or 767,347 cubic metres of water (equal to about as many *tuns* by measure, *tons* by weight,) were supplied daily ; or 227 gallons (103·1 decalitres), being rather more than a *ton* by weight, to each house, and 29·1 gallons (13·2 decalitres) to each person, against 29·0 gallons during September 1887.

*Note.*—The Return for September 1888, compared with that for the corresponding month of 1887, shows an increase of 12,611 houses, and an increase of 3,707,809 gallons of water supplied daily.

#### ANALYSIS OF METROPOLITAN WATER SUPPLY DURING SEPTEMBER.

Grove House, Pembridge Square, W.,  
12th October, 1888.

SIR,

I HAVE to report to you in the following Table the results of the chemical analyses of the waters supplied to the inner, and portions of the outer, circle of the Metropolis during the month of September.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity contained in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent 0·6, New River 0·9, Colne Valley 1·3, Grand Junction 1·3, Chelsea 1·4, Tottenham 1·4, West Middlesex 1·6, Lambeth 1·6, Southwark 2·2, East London 2·4.

The Thames water sent out by the Chelsea, West Middlesex, Southwark, Grand Junction, and Lambeth Companies contained in every case less organic matter than the August samples, the proportion present being exceptionally small for river water. All the samples were clear and bright.

The water principally derived from the Lea, and distributed by the New River Company contained even less organic matter than any of the Thames waters, whilst the proportion of

organic matter in the East London Company's supply, although small in absolute amount, was slightly greater than that in the Thames-derived waters. Both samples were clear and bright.

The deep-well waters of the Kent and Colne Valley Companies and of the Tottenham Local Board of Health contained, as usual, only a very small quantity of organic matter. The Colne Valley Company's water was not softened to quite the usual extent.

Seen through a stratum two feet deep, the waters presented the following appearances:—Kent, Colne Valley, and New River, clear and colourless; Tottenham, clear and nearly colourless; Chelsea, West Middlesex, Southwark, Grand Junction, Lambeth, and East London, clear and very pale yellow.

Dr. Hill, F.I.C., the Medical Officer of Health for Birmingham, reports that the water supplied to that town "resembled that of the previous month."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College reports that the water supplied to that city from Loch Katrine was "light brown in colour and contained a little suspended matter."

The Registrar General, &c. &c.

I am, &c.

E. FRANKLAND.

RESULTS OF ANALYSIS EXPRESSED IN PARTS PER 100,000.

\* Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the Borough.

† Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the water. The Table is to be read thus:—the Chelsea Company's water, collected on the 28th September at the Horseguards cab-rank, had a temperature of 15°·6 C.; 100,000 lbs. of it contained 26·00 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained ·064 lb. of carbon and ·017 lb. of nitrogen. The above quantity of water also contained no ammonia, and ·175 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was ·192 lb. The above weight of water also contained 1·7 lbs. of chlorine; and 18·9 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

RE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospitals, outside Registration London (see Table 5).

The numbers in this column are the average weekly Deaths for the ten years 1878-87, raised by 9.045 per cent. for increase of population. The ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

These cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical man, the case is returned under the heading "no statement."

No evidence at inquest is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, or suicide. All such cases are classed under "accident or negligence."

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it is situated; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N.R., New River; E.L., East London and K., the Kent Company.

MEASLES, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT during the 13th October, 1888.

The height of the of the barometer is 159 feet above the mean level of the sea; no observation has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1888 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

—In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.

The reading of the barometer increased from 29.93 in. at the beginning of the week to 30.04 in.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

22nd October, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 21·0 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |            |             |             | TOWNS.             | Weeks ending |            |             |             |

| Huddersfield | 13·7         | 14·3       | 28·5        | 18·3        | Salford*           | 25·6         | 19·8       | 26·7        | 26·5        |
| Hull -       | 16·2         | 19·6       | 21·7        | 16·5        | Sheffield -        | 25·0         | 22·9       | 23·4        | 23·0        |
| Leeds -      | 22·0         | 21·7       | 24·1        | 25·7        | Sunderland         | 16·2         | 17·0       | 24·9        | 29·3        |
| Leicester*   | 19·6         | 18·1       | 21·0        | 16·0        | Wolverhampton -    | 19·8         | 13·4       | 18·5        | 23·6        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·3 in Blackburn and in Wolverhampton, and 1·9 in Leeds; from *scarlet fever*, 1·6 in Sunderland and in Derby, and 2·6 in Blackburn; from *whooping-cough*, 1·0 in Cardiff; from "*fever*," 1·0 in Preston, 1·2 in Salford, 1·4 in Bolton, and 1·6 in Birkenhead; and from *diarrhoea*, 1·5 in Portsmouth, 2·5 in Preston, and 2·8 in Bolton. The 53 deaths from *diphtheria* in the twenty-eight towns included 36 in London, and 6 in Manchester. *Small-pox* did not cause a single death in any of the twenty-eight great towns.

### LONDON.

In LONDON† 2459 BIRTHS and 1641 DEATHS were registered. Allowing for increase of population, the births were 329 below, while the deaths exceeded by 30, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had increased in the four preceding weeks from 15·8 to 18·7, further rose last week to 20·0, and exceeded the rate recorded in any week since April last. During the first three weeks of the current quarter the death-rate averaged 18·4, and was 0·3 below the mean rate in the corresponding periods of the ten years 1878–87.

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

The 1641 deaths included 80 from measles, 33 from scarlet fever, 36 from diphtheria, 12 from whooping-cough, 19 from enteric fever, 1 from an ill-defined form of continued fever, 42 from diarrhoea and dysentery, and not one from small-pox, typhus, or cholera; thus, 223 deaths were referred to these diseases, being 19 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 4; and no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital during the week. The fatal cases of *measles*, which had been 30, 39, and 50 in the three preceding weeks, further rose last week to 80, and exceeded the corrected average by 54; 8 belonged to Marylebone, 10 to Pancras, 8 to Shoreditch, 6 to Bethnal Green, 7 to Stepney, and 9 to Poplar sanitary areas. The 33 deaths from *scarlet fever* also showed an increase upon recent weekly numbers, but were 22 below the corrected average; 3 belonged to St. George Hanover Square, 3 to Pancras, 7 to Bethnal Green (of which but one occurred in hospital), and 3 to Lambeth sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 1003 scarlet fever patients, against numbers increasing in the eight preceding weeks from 774 to 983; 101 cases were admitted during the week, against 92 and 119 in the two previous weeks. The 36 fatal cases of *diphtheria* exceeded the number returned in any recent week, and were 14 above the corrected average; 8 belonged to Kensington, 2 to Paddington, 2 to St. George Hanover Square, 2 to Islington, 2 to Whitechapel, 2 to Poplar, and 5 to Lambeth sanitary areas. The 12 fatal cases of *whooping-cough* showed a decline of 6 from the number in the previous week, and were 15 below the corrected average. The deaths attributed to *diarrhoea* and *dysentery*, which had declined in the eight preceding weeks from 192 to 43, were last week 42, and exceeded the corrected average by 2; 34 were of children under five years of age, including 24 of infants under one year of age.

The deaths referred to *enteric fever*, which had been 8 and 13 in the two preceding weeks, further rose last week to 19, but were 7 below the corrected average; 2 belonged to Pancras, and 2 to Lambeth sanitary areas. The death of a child aged 21 months in Clerkenwell was indefinitely referred to "continued fever, diarrhoea." The Metropolitan Asylum Hospitals contained 78 cases of enteric fever, and 2 of typhus, on Saturday last; 9 cases of enteric fever were admitted during the week, against 5 and 11 in the two preceding weeks.

The deaths referred to diseases of the respiratory organs, which had increased in the seven preceding weeks from 130 to 311, further rose last week to 364, and exceeded the corrected average by 18.

Different forms of violence caused 51 deaths; 45 were the result of negligence or accident, among which were 18 from fractures and contusions, 6 from burns and scalds, 4 from drowning, 3 from poison, and 10 of infants under one year of age from suffocation. The 18 deaths from fractures and contusions were thus caused:—7 by accidents from vehicles in street; 1 by kick of mule; 2 by accidents on railway; 1 by fall on pavement; 1 by fall through skylight; 1 by fall into basement; 1 by fall in room; 1 by fall from window; 1 by jumping from window during a conflagration; 1 by fall, the nature of which was not stated; and 1 by injuries received on board a steamship during a storm. An inquest was held in each of these 18 cases. Six cases of suicide were registered, corresponding with the corrected average.

#### GREATER LONDON.

In Greater London 3233 births and 2004 deaths were registered, corresponding to annual rates of 30·5 and 18·9 per 1000 of the estimated population. In the Outer Ring 10 deaths from diarrhoea, 8 from diphtheria, 5 from measles, and 5 from whooping-cough, were registered. The 8 deaths from diphtheria included 2 in Godstone, 2 in West Ham, and 2 in Walthamstow sub-districts. Both measles and scarlet fever also caused 2 deaths in West Ham sub-district.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 30·12 ins.; the lowest reading was 29·82 ins. at the beginning of the week and the highest 30·23 ins. at the end of the week. The mean temperature of the *air* was 43°·5, and 7°·5 below the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably below the average on each day of the week, the coldest days being Sunday and Monday. The direction of the *wind* was variable and the horizontal movement of the air averaged 6·3 miles per hour, which was 4·5 miles below the average in the corresponding weeks of 16 years. No rain was measured during the week. The duration of registered bright sunshine in the week was 24·5 hours, against 35·2 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan and H.M. Hospitals, outside Registration London (see Table 5).  
The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9·045 per cent. for increase of population.  
As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.  
Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical man, the case is returned under the heading "no statement."  
The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, or suicide. All such cases are classed under "accident or negligence."

TABLE 3. LONDON.—POPULATION; BIRTHS, DEATHS from ALL CAUSES, and from SMALL-POX, MEASLES, SORE THROAT, and from other Causes during the Week ending

| The DEATHS registered in the Week include                                   |  |                                     |                                     |                                 |                                     |            |          |                |             |                 |         |                                |                              |            |           |     |    |                                   |

The height of the cistern of the barometer is 158 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are made daily at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1875 for the barometer, and of the photographic records made during the twenty years ending 1868 for the thermometer. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1868, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

At reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. very strong.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the approximate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.

The reading of the barometer increased from 29.82 in. at the beginning of the week to 30.23 in.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·4 in Leicester, 1·5 in Liverpool and in Leeds, 1·7 in Huddersfield, 2·2 in Portsmouth, and 3·8 in Cardiff; from *scarlet fever*, 1·0 in Leeds; from *whooping-cough*, 1·1 in Norwich; from "*fever*," 1·1 in Derby, 1·2 in Salford and in Sunderland, 1·3 in Halifax, and 1·9 in Cardiff; and from *diarrhoea*, 1·3 in Brighton, 1·5 in Portsmouth, and 2·0 in Preston. The 47 deaths from *diphtheria* in the twenty-eight towns included 31 in London, 5 in Manchester, 2 in Nottingham, and 2 in Halifax. *Small-pox* caused one death in London and one in Preston, but not one in any of the twenty-six other great towns.

### LONDON.

In LONDON† 2665 BIRTHS and 1737 DEATHS were registered. Allowing for increase of population, the births were 184 below, while the deaths exceeded by 104, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had increased in the five preceding weeks from 15·8 to 20·0, further rose last week to 21·2, and exceeded the rate recorded in any week since the middle of March last. During the first four weeks of the current quarter the death-rate averaged 19·1, and was identical with the mean rate in the corresponding periods of the ten years 1878–87.

The 1737 deaths included 1 from small-pox, 100 from measles, 25 from scarlet fever, 31 from diphtheria, 18 from whooping-cough, 17 from enteric fever, 2 from ill-

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

‡ Through a clerical error the annual death-rate in Oldham during the week ending 20th October was incorrectly reported in the last issue of the Weekly Return as 24·1 per 1000, instead of 20·8.

defined forms of continued fever, 30 from diarrhoea and dysentery, 1 from infantile cholera, and not one from typhus; thus, 225 deaths were referred to these diseases, being 26 above the corrected average weekly number.

*Small-pox* caused one death, the corrected average being 7. This fatal case was of a gasfitter, aged 27 years, and occurred in the Homerton Small-pox Hospital, to which the deceased had been admitted from Hall Place, Paddington. No small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, at the end of the week. The fatal cases of *measles*, which had increased in the four preceding weeks from 30 to 80, further rose last week to 100, and exceeded the corrected average by 71; 10 belonged to Marylebone, 10 to Pancras, 4 to Clerkenwell, 8 to Shoreditch, 11 to Stepney, 12 to Poplar, 6 to Wandsworth, and 7 to Camberwell sanitary areas. The 25 deaths from *scarlet fever* showed a decline from those returned in the two previous weeks, and were 32 below the corrected average; 2 belonged to Islington, 5 to Bethnal Green (including 2 hospital cases admitted from 5, Stepney Green), 2 to Mile End Old Town, 2 to Poplar, 2 to Lambeth, and 4 to Camberwell (including 2 at 111, Camden Grove North) sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 1009 scarlet fever patients, against numbers increasing in the nine preceding weeks from 774 to 1003; 81 cases were admitted during the week, against 119 and 101 in the two previous weeks. The 31 fatal cases of *diphtheria* showed a decline of 5 from the number in the previous week, but exceeded the corrected average by 12; 3 belonged to Kensington, 3 to Chelsea, 3 to Bethnal Green, 2 to Stepney, 2 to Wandsworth, 2 to Camberwell, and 2 to Lewisham sanitary areas. The 18 fatal cases of *whooping-cough* were 11 below the corrected average. The 30 deaths attributed to *diarrhoea* and *dysentery* showed a further decline from recent weekly numbers, but exceeded the corrected average by 2. One death was referred to *infantile cholera*.

The deaths referred to *enteric fever*, which had been 8, 13, and 19 in the three preceding weeks, were last week 17, and were 10 below the corrected average; 2 belonged to Pancras, 2 to Islington, 2 to Hackney, and 2 to Poplar sanitary areas. The death of a child, aged 4 years, in Kensington, was indefinitely referred to "febricula, 10 days," and that of an adult, in Newington, to "fever, 10 days." The Metropolitan Asylum Hospitals contained 74 cases of enteric fever, and 1 of typhus, on Saturday last; 7 cases of enteric fever were admitted during the week, against 11 and 9 in the two preceding weeks.

The deaths referred to diseases of the respiratory organs, which had increased in the eight preceding weeks from 130 to 364, further rose last week to 522, and exceeded the corrected average by 134.

Different forms of violence caused 57 deaths; 53 were the result of negligence or accident, among which were 24 from fractures and contusions, 8 from burns and scalds, 4 from drowning, and 12 of infants under one year of age from suffocation. The 24 deaths from fractures and contusions were thus caused:—10 by accidents from vehicles in street; 4 by accidents on railway; 1 by fall over trolley; 1 by fall into dock; 1 by fall in stable; 1 by fall on staircase; 1 by fall in street; 3 by fall, the nature of which was not stated; 1 by being crushed between steamship and barge; and 1 by fracture, the cause of which was not stated. An inquest was held in each of these 24 cases. Two cases of suicide were registered, the corrected average being 7.

The deaths of 3 males, aged 30, 41, and 71 years, and of a female, aged 47 years, were more or less directly referred, after inquest, to want and exposure; 3 of these cases occurred in East London, and one in Southwark.

#### GREATER LONDON.

In Greater London 3480 births and 2102 deaths were registered, corresponding to annual rates of 32.9 and 19.8 per 1000 of the estimated population. In the Outer Ring 11 deaths from diarrhoea, 9 from measles, 7 from whooping-cough, and 4 from "fever," were registered. Three fatal cases of measles and 2 deaths from "fever" occurred in Tottenham sub-district.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 30.05 ins.; the highest reading was 30.28 ins. on Monday morning, and the lowest 29.80 ins. on Thursday afternoon. The mean temperature of the *air* was 49° 2, and 0° 2 below the average in the corresponding weeks of 20 years ending 1868. The mean was considerably below the average in each of the first four days of the week, whereas a large excess prevailed on Thursday, Friday, and Saturday. The general direction of the *wind* was S.W. and the horizontal movement of the *air* averaged 9.1 miles per hour, which was 2.1 miles below the average in the corresponding weeks of 16 years. No rain was measured during the week. The duration of registered bright *sunshine* in the week was 25.5 hours, against 23.6 hours at Glynde Place, Lewes.

RE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Hospitals, outside Registration London (see Table 3). The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.045 per cent. for increase of population. The ten years average could not be correctly ascertained, the average for the six years 1832-7 has been used. The cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical man, the case is returned under the heading "no statement." The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, &amp;c., during the Week ending—

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it is situated; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N. R., New River; E. L., East London and K., the Kent Company.

r, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
day, the 27th October, 1888.

The height of the cistern of the barometers 159 feet above the mean level of the sea; no corrections have been applied to the readings to reduce to sea level.

Observations are usually taken at 9h, A.M.; noon; 3h, P.M.; and 9h, P.M. The means of the observations of the barometer, the dry bulb thermometer, and the wet bulb thermometer are referred into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1868; and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "*higher*," and - "*lower*," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The variables employed are: - P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the 24th day, or from midnight to midnight, of the day to which the observations refer, except in the case of rain, fog, or from midnight to midnight, of the day to which the observations refer, at the beginning of the week to 20.25 in

## GENERAL REMARKS.

|           |    |                              |      |   |
|-----------|----|------------------------------|------|---|
| SUNDAY    | 21 | 6.3                          | 10.3 | Dense fog prevailed in morning; cloudless throughout day, and very fine till night; then foggy.                 |
| MONDAY    | 22 | 1.8                          | 10.2 | Thin fog in morning; partially cloudy and fine till evening; cloudless with variable fog at night.              |
| TUESDAY   | 23 | 4.0                          | 10.2 | Dense fog in morning; cloudless and fine till evening; few light clouds and fog at night. Cold.                 |
| WEDNESDAY | 24 | 5.7                          | 10.1 | Dense fog in morning; cloudless and very fine till evening; cloudy at night.                                    |
| THURSDAY  | 25 | 3.5                          | 10.0 | Fine; generally cloudy. Very mild.  |

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 44. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, NOVEMBER 3. [Price 1½d.

General Register Office, Somerset House,  
5th November, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 19·6 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| Leicester*   | 21·0         | 16·0        | 16·0        | 19·9       | Wolverhampton -      | 18·5         | 23·6        | 21·7        | 17·2       |

The highest annual death-rates, measured by last week's mortality, were:—from *measles*, 1·7 in Huddersfield, 1·8 in Leicester, 1·9 in Wolverhampton, 2·2 in Leeds, 2·4 in Cardiff, and 3·1 in Blackburn; from *scarlet fever*, 1·1 in Norwich and in Derby, and 1·8 in Blackburn; from *whooping-cough*, 1·3 in Halifax, and 2·3 in Newcastle-upon-Tyne; from "*fever*," 1·4 in Nottingham, and 1·5 in Preston; and from *diarrhœa*, 1·4 in Cardiff, and 2·0 in Newcastle-upon-Tyne. The 47 deaths from *diphtheria* in the twenty-eight towns included 32 in London, 2 in Birmingham, 2 in Manchester, 3 in Salford, and 4 in Newcastle-upon-Tyne. *Small-pox* caused one death in London, but not one in any of the twenty-seven other great towns.

## LONDON.

In LONDON† 2373 BIRTHS and 1613 DEATHS were registered. Allowing for increase of population, the births were 534, and the deaths 27, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had increased in the six preceding weeks from 15·8 to 21·2, declined again last week to 19·7. During the first five weeks of the current quarter the death-rate averaged 19·2, and was 0·1 below the mean rate in the corresponding periods of the ten years 1878–87.

The 1613 deaths included 1 from small-pox, 88 from measles, 24 from scarlet fever, 32 from diphtheria, 19 from whooping-cough, 22 from enteric fever, 34 from

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonston, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

diarrhœa and dysentery, and not one from typhus, ill-defined forms of fever, or cholera; thus, 220 deaths were referred to these diseases, being 19 above the corrected average weekly number.

*Small-pox* caused one death, the corrected average being 5; this death was of the wife of a labourer, in Foskett Road, Fulham, and was the subject of an inquest, the verdict being "sudden; small-pox, p.m." No small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, during the week. The fatal cases of *measles*, which had increased in the five preceding weeks from 30 to 100, declined last week to 88, but exceeded the corrected average by 54; 7 belonged to Kensington, 6 to Pancras, 7 to Stepney, 7 to Mile End Old Town, and 14 to Poplar sanitary areas. The 24 deaths from *scarlet fever* showed a further decline from the numbers returned in the two previous weeks, and were 36 below the corrected average; 4 belonged to Hackney, 3 to Bethnal Green, 2 to Mile End Old Town, 4 to Camberwell, and 2 to Greenwich sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 1007 scarlet fever patients, against 1003 and 1009 in the two preceding weeks; 71 cases were admitted during the week, against 119, 101, and 81 in the three previous weeks. The 32 fatal cases of *diphtheria* exceeded the number in the previous week by one, and were 15 above the corrected average; 2 belonged to Paddington, 2 to Fulham, 2 to Pancras, 2 to Bethnal Green, 2 to St. George in the East (at 7, Bird Street), 2 to St. George Southwark, 3 to Lambeth, 3 to Battersea (including 2 at 7, Amies Street), 2 to Wandsworth, and 2 to Woolwich (at 8, Acorn Street), sanitary areas. The 19 fatal cases of *whooping-cough* were 9 below the average. The 34 deaths attributed to *diarrhœa* and *dysentery* showed an increase upon the number in the previous week, and exceeded the corrected average by 9.

The deaths referred to *enteric fever*, which had been 19 and 17 in the two preceding weeks, rose last week to 22, but were 6 below the corrected average; 6 belonged to Islington, 2 to Lambeth, and 4 to Camberwell sanitary areas. The Metropolitan Asylum Hospitals contained 77 cases of enteric fever, and 2 of typhus, on Saturday last; 7 cases of enteric fever were admitted during the week, against 11, 9, and 7 in the three preceding weeks.

The deaths referred to diseases of the respiratory organs, which had increased in the nine preceding weeks from 130 to 522, declined last week to 441, but exceeded the corrected average by 32.

Different forms of violence caused 59 deaths; 46 were the result of negligence or accident, among which were 24 from fractures and contusions, and 14 of infants under one year of age from suffocation. The 24 deaths from fractures and contusions were thus caused:—3 by accidents from vehicles in the street; 3 by accidents on railway; 3 by fall down steps or stairs; 1 by fall on staircase; 1 by fall into area; 1 by fall on floor; 1 by fall into barge; 1 by fall from mother's arms; 1 by fall from window during sleep-walking; 2 by fall, the nature of which was not stated; 1 by blow from winch; 1 by being crushed by log of timber (amputation); 1 by being crushed against guard of engine; 1 by injuries from an iron wire; 1 by injuries from fall of pail; and 2 by fracture, the cause of which was not stated. An inquest was held in each of these 24 cases, except one of the last two. Nine cases of suicide were registered, the corrected average being 7.

The deaths of 4 illegitimate infants were registered during the week at a nursing home for infants at 57, Stepney Green, Mile End Old Town.

#### GREATHER LONDON.

In Greater London 3124 births and 2025 deaths were registered, corresponding to annual rates of 29·5 and 19·1 per 1000 of the estimated population. In the Outer Ring 11 deaths from measles, 10 from diphtheria, and 10 from diarrhœa were registered. Measles caused 5 deaths in West Ham, and 2 in Leyton sub-districts; and 2 deaths from diphtheria were returned in Croydon, in Kingston, and in Tottenham sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·67 ins.; the highest reading was 30·12 ins. at the beginning of the week, and the lowest 29·23 ins. on Friday morning. The mean temperature of the *air* was 50°·3, and 3°·0 above the average in the corresponding weeks of 20 years ending 1868. The mean was slightly below the average on Thursday, but showed an excess (which was 12°·0 on Sunday) on each of the other days of the week. The general direction of the *wind* was S.W., and the horizontal movement of the air averaged 9·7 miles per hour, which was 1·8 miles below the average in the corresponding weeks of 16 years. *Rain* fell on six days of the week, to the aggregate amount of 2·68 inches. The duration of registered bright sunshine in the week was 3·8 hours, against 4·0 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylum Hospitals, outside Registration London (see Table 5).  
 \* The numbers in this column are the average weekly Deaths for the ten years 1878-87, raised by 9.048 per cent. for increase of population.  
 † As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.  
 ‡ Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."  
 § The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, DYPHTHERIA, WHOOPING-COUGH, TYPHUS, ENTERIC (OR TYPHOID) FEVER, SIMPLE CONTINUED FEVER, DIARRHÆA, VIOLENCE, INQUEST CASES, and Deaths in Public Institutions, during the Week ended

|   |  | The DEATHS registered in the Week include    |  |  |                                 |                                     |             |          |                |             |                 |         |                                |                              |            |           |     |                   |                                   |

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 45. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, NOVEMBER 10. [Price 1½d.]

General Register Office, Somerset House,  
12th November, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 19·0 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000 :—

| Halifax -    | 17·6         | 24·7        | 15·0       | 15·0        | Preston -          | 25·8         | 25·3        | 23·7       | 24·8        |
| Huddersfield | 18·3         | 29·1        | 23·4       | 23·4        | Salford*           | 26·5         | 24·4        | 21·7       | 20·3        |
| Hull -       | 16·5         | 22·4        | 17·0       | 12·9        | Sheffield -        | 23·0         | 20·3        | 22·2       | 16·1        |
| Leeds -      | 25·7         | 24·4        | 19·5       | 18·6        | Sunderland -       | 29·3         | 22·2        | 21·0       | 19·4        |
| Leicester*   | 16·0         | 16·0        | 19·9       | 14·6        | Wolverhampton -    | 23·6         | 21·7        | 17·2       | 14·0        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·8 in Blackburn, 2·2 in Portsmouth, 3·0 in Leeds, and 3·8 in Cardiff; from *scarlet fever*, 1·0 in Manchester, 1·2 in Salford, and 2·2 in Blackburn; from *whooping-cough*, 1·0 in Birkenhead; from "*fever*," 1·1 in Oldham, 1·3 in Newcastle-upon-Tyne, and 1·6 in Salford; and from *diarrhœa*, 1·4 in Bolton and in Cardiff, and 1·6 in Derby. The 45 deaths from *diphtheria* in the twenty-eight towns included 34 in London, 2 in Liverpool, and 6 in Salford. *Small-pox* caused one death in Preston and one in Hull, but not one in London or in any of the twenty-five other great towns.

## LONDON.

In LONDON† 2770 BIRTHS and 1520 DEATHS were registered. Allowing for increase of population, the births were 70, and the deaths 167, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 21·2 and 19·7 in the two preceding

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

weeks, further declined last week to 18·5. During the first six weeks of the current quarter the death-rate averaged 19·1, and was 0·4 below the mean rate in the corresponding periods of the ten years 1878-87.

The 1520 deaths included 109 from measles, 18 from scarlet fever, 34 from diphtheria, 15 from whooping-cough, 14 from enteric fever, 18 from diarrhoea and dysentery, and not one from typhus, ill-defined forms of fever, or cholera; thus, 208 deaths were referred to these diseases, being 11 below the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 9; and no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, during the week. The fatal cases of *measles*, which had been 100 and 88 in the two preceding weeks, rose again last week to 109, and exceeded the corrected average by 65; 9 belonged to Paddington, 9 to Kensington, 8 to Marylebone, 13 to Pancras, 9 to Clerkenwell, 7 to Mile End Old Town, and 10 to Poplar sanitary areas. The 18 deaths from *scarlet fever* showed a further decline from recent weekly numbers, and were 44 below the corrected average; 2 belonged to Lambeth, 3 to Camberwell, and 2 to Lewisham sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 969 scarlet fever patients, against 1009 and 1007 in the two preceding weeks; 85 cases were admitted during the week, against numbers declining from 119 to 71 in the four previous weeks. The 34 fatal cases of *diphtheria* exceeded the number returned in either of the two previous weeks, and exceeded the corrected average by 12; 4 belonged to Kensington, 3 to Westminster, 4 to Pancras, 3 to Mile End Old Town (including 2 at 33, Devonshire Street), 6 to Lambeth, 2 to Wandsworth, and 2 to Greenwich sanitary areas. The 15 fatal cases of *whooping-cough* were fewer by 4 than the number in the previous week, and 13 below the corrected average; 4 belonged to Camberwell sanitary area. The deaths attributed to *diarrhoea* and *dysentery*, which had ranged in the eleven preceding weeks between 192 and 30, further declined last week to 18, and were 5 below the corrected average.

The deaths referred to *enteric fever*, which had been 17 and 22 in the two preceding weeks, declined last week to 14, and were 13 below the corrected average; 2 belonged to Islington, 2 to Newington, and 2 to Camberwell sanitary areas. The Metropolitan Asylum Hospitals contained 76 cases of enteric fever, and 2 of typhus, on Saturday last; 9 cases of enteric fever were admitted during the week, against 7 in each of the two previous weeks.

The deaths referred to diseases of the respiratory organs, which had been 522 and 441 in the two preceding weeks, further declined last week to 373, and were 60 below the corrected average.

Different forms of violence caused 50 deaths; 37 were the result of negligence or accident, among which were 17 from fractures and contusions, 6 from burns and scalds, and 10 of infants under one year of age from suffocation. The 17 deaths from fractures and contusions were thus caused:—6 by accidents from vehicles in street; 2 by accidents on railway; 1 by fall from window; 1 by fall from wall; 1 by fall down stairs; 1 by fall in room; 1 by fall into hold of ship; 1 by fall, the nature of which was not stated; 1 by injuries from fall of bench; and 2 by fracture, the cause of which was not stated. An inquest was held in each of these 17 cases, except one of the last two. Thirteen cases of suicide were registered, the corrected average being 6.

#### GREATER LONDON.

In Greater London 3571 births and 1896 deaths were registered, corresponding to annual rates of 33·7 and 17·9 per 1000 of the estimated population. In the Outer Ring 9 deaths from measles, 7 from "fever", 6 from scarlet fever, 6 from diphtheria, and 6 from whooping-cough were registered. Three fatal cases of fever occurred in Croydon and 3 in Tottenham sub-districts; and 3 of measles in Tottenham sub-district.

Professor Frankland's report upon the quality of the water supplied by the various companies to the Metropolitan area during October will be found on pages 463-464.

## METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·64 ins.; the lowest reading was 29·56 ins. at the beginning of the week, and the highest 29·71 ins. on Saturday morning. The mean temperature of the *air* was 42°·1, and 2°·6 below the average in the corresponding weeks of 20 years ending 1868. The mean showed an excess on Sunday and Monday, but was below the average on each of the other days of the week. The general direction of the *wind* was Easterly, and the horizontal movement of the air averaged 13·9 miles per hour, which was 2·2 miles above the average in the corresponding weeks of 16 years. *Rain* fell on three days of the week, to the aggregate amount of 0·20 of an inch. The duration of registered bright sunshine in the week was 12·5 hours, against 10·6 hours at Glynde Place, Lewes.

THE REGISTRAR GENERAL has to acknowledge the courtesy of the LONDON WATER COMPANIES who have furnished him with the average daily quantity of Water supplied during the month of OCTOBER 1888; according to their returns 161,994,888 gallons or 736,017 cubic metres of water (equal to about as many *tuns* by measure, *tons* by weight,) were supplied daily; or 218 gallons 99·0 decalitres), being rather less than a *ton* by weight, to each house, and (assuming 7·8 persons to each house) 27·9 gallons (12·7 decalitres) to each person, against 27·9 gallons in October 1887.

*Note.*—The Return for October 1888, compared with that for the corresponding month of 1887, shows an increase of 13,084 houses, and an increase of 2,878,918 gallons of water supplied daily.

## ANALYSIS OF METROPOLITAN WATER SUPPLY DURING OCTOBER.

Grove House, Pembroke Square, W.,  
9th November, 1888.

SIR, I HAVE to report to you in the following Table the results of the chemical analyses of the waters supplied to the inner, and portions of the outer, circle of the Metropolis during the month of October.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity contained in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent, Colne Valley, and Tottenham 0·8, New River 0·9, Southwark 1·6, Chelsea 1·8, Grand Junction and Lambeth 1·9, West Middlesex 2·0, East London 2·1.

The proportion of organic matter present in the Thames water supplied by the Chelsea, West Middlesex, Southwark, Grand Junction, and Lambeth Companies was, as in the previous month, exceptionally small for river water. All the samples were clear and bright.

The water principally derived from the Lea, and distributed by the New River and East London Companies also contained only a small proportion of organic matter, the amount present in the New River Company's supply being less than in any of the other river waters. Both waters were clear and bright.

The deep-well waters of the Kent and Colne Valley Companies and of the Tottenham Local Board of Health contained, as usual, only a very small proportion of organic matter, and the Colne Valley Company by softening their supply with lime before delivery, thereby rendered it also of excellent quality for washing and all other domestic purposes.

Seen through a stratum two feet deep, the waters presented the following appearances:—Kent, Colne Valley, Tottenham, and New River, clear and colourless; Chelsea, West Middlesex, Southwark, Grand Junction, Lambeth, and East London, clear and very pale yellow.

Dr. Hill, F.I.C., the Medical Officer of Health for Birmingham, reports of the water supplied to that town "that the organic matter is a trifle higher than during the two previous months."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College reports that the water supplied to that city from Loch Katrine was "light brown in colour and contained a little suspended matter."

The Registrar General, &c. &c.

I am, &c.

E. FRANKLAND.

\* Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the Borough.  
† Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the water. The Table is to be read thus:—the Chelsea Company's water, collected on the 26th October at the Horseguards cab-rank, had a temperature of 10°·8 C.; 100,000 lbs. of it contained 25·76 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained ·075 lb. of carbon and ·030 lb. of nitrogen. The above quantity of water also contained no ammonia, and ·189 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was ·219 lb. The above weight of water also contained 1·8 lbs. of chlorine; and 19·1 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

\* The deaths include those of London residents in the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

## METEOROLOGICAL OBSERVATIONS. (See TABLE 1.)

The following gentlemen have kindly placed their meteorological observations at the disposal of the Registrar General, and the results have been compiled by J. Glaisher, Esq., F.R.S.:—F. E. Sawyer, Esq., F.S.A., F.R. Met. Soc., Brighton; John Merrifield, Esq., LL.D., Plymouth; R. C. Cann Lippincott, Esq., Bristol; E. Simpson, Esq., Wrotesley, Wolverhampton; Henry Tomkins, Esq., M.D., Leicester; Arthur Brown, Esq., and B. A. Whitelegg, Esq., M.D., Nottingham; J. Hartnup, Esq., F.R.A.S., Liverpool; H. O. Pilkington, Esq., M.R.C.S., Preston; J. McEandborough, Esq., F.G.S., F.R. Met. Soc., Bradford; Mr. E. Peak, Hull; A. E. Harris, Esq., L.R.C.P., F.R.G.S., Medical Officer of Health, Sunderland; and Wm. Lyall, Esq., Newcastle-on-Tyne.

[illegible]

The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Police Station, outside Registration London (see Table 5).  
 The numbers in this column are the average weekly Deaths for the ten years 1878-87, raised by 9.046 per cent. for increase of population. The ten years average could not be correctly ascertained, the average for the six years 1832-7 has been used.  
 The cases of small-pox only are returned as "vaccinated" or as "unvaccinated," which are so certified by registered medical men. When the attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical man, the cause is returned under "no cause."  
 Evidence at inquest is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, neglect, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, &amp;c., during the Week

|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| The height of the cistern of the barometer is 139 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glashier's Hygro-metrical Tables. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The numbers in column 29 derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| The reading of the barometer increased from 29.56 in. at the beginning of the week to 29.70 in. by 9h. A.M. on the 6th; decreased to 29.60 in. by noon on the 7th; increased to 29.70 in.   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

The height of the cistern of the barometer is 159 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the over-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1875 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables. The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 25 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875. The readings of the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average. The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cable Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: +, P. positive; N. negative; w. weak; s. strong; and v. variable. The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the approximate duration of bright sunshine on each day. The result of all the observations are to be understood as applying to the civil day, from midnight to midnight. The readings of the barometer increased from 29.58 in. at the beginning of the week to 29.70 in. by 9h. A.M. on the 10th; decreased to 29.60 in. by noon on the 10th; increased to 29.70 in.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 46. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, NOVEMBER 17. [Price 1½d.

General Register Office, Somerset House,  
19th November, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 19·7 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |            |             |             | TOWNS.             | Weeks ending |            |             |             |

| Halifax -    | 24·7         | 15·0       | 15·0        | 18·9        | Preston -          | 25·3         | 23·7       | 24·8        | 19·7        |
| Huddersfield | 29·1         | 23·4       | 23·4        | 20·0        | Salford*           | 24·4         | 21·7       | 20·3        | 18·0        |
| Hull -       | 22·4         | 17·0       | 12·9        | 16·8        | Sheffield -        | 20·3         | 22·2       | 16·1        | 20·1        |
| Leeds -      | 24·4         | 19·5       | 18·6        | 21·1        | Sunderland -       | 22·2         | 21·0       | 19·4        | 21·4        |
| Leicester*   | 16·0         | 19·9       | 14·6        | 14·9        | Wolverhampton -    | 21·7         | 17·2       | 14·0        | 24·3        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·9 in Oldham, 3·2 in Wolverhampton, 4·4 in Blackburn, and 6·2 in Cardiff; from *scarlet fever*, 1·2 in Salford, and 1·3 in Blackburn; from *whooping-cough*, 1·4 in Cardiff; and from "*fever*," 1·1 in Manchester, 1·2 in Salford, and 1·8 in Blackburn. The 62 deaths from *diphtheria* in the twenty-eight towns included 44 in London, 5 in Salford, 4 in Manchester, 4 in Nottingham, and 2 in Birmingham. *Small-pox* caused one death in Cardiff, but not one in London or in any of the twenty-six other great towns.

## LONDON.

In LONDON† 2606 BIRTHS and 1619 DEATHS were registered. Allowing for increase of population, the births were 188, and the deaths 75, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 21·2, 19·7, and 18·5 in the three preceding weeks, rose again last week to 19·7. During the first seven weeks of the current quarter the death-rate averaged 19·2 per 1000, and was 0·5 below the mean rate in the corresponding periods of the ten years 1878–87.

The 1619 deaths included 124 from measles, 31 from scarlet fever, 44 from diphtheria, 17 from whooping-cough, 15 from enteric fever, 16 from diarrhoea and

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

dysentery, and not one from small-pox, typhus, ill-defined forms of fever, or cholera; thus, 247 deaths were referred to these diseases, being 30 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 9; and no small-pox patients were under treatment in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, during the week. The fatal cases of *measles*, which had been 100, 88, and 109 in the three preceding weeks, further rose last week to 124, and exceeded the corrected average by 80; 8 belonged to Kensington, 10 to Marylebone, 15 to Pancras, 8 to Bethnal Green, 14 to Mile End Old Town, 9 to Poplar, and 7 to Camberwell sanitary areas. The deaths from *scarlet fever* which had declined in the four preceding weeks from 33 to 18, rose again last week to 31, but were 27 below the corrected average; 2 belonged to Kensington, 2 to Pancras, 2 to Islington, 4 to Hackney, 2 to Bethnal Green, 2 to Poplar, 4 to Lambeth, and 6 to Camberwell (including 2 at 5, Baker's Terrace) sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 1080 scarlet fever patients, against 1009, 1007, and 969 in the three preceding weeks; 83 cases were admitted during the week, against 71 and 85 in the two previous weeks. The 44 deaths from *diphtheria* showed a further increase upon recent weekly numbers, and exceeded the corrected average by 23; 5 belonged to Kensington, 2 to Hammersmith, 2 to Pancras, 2 to Hackney, 2 to Shoreditch, 4 to Bethnal Green, 3 to St. Saviour Southwark, 5 to Lambeth, 2 to Wandsworth, and 5 to Camberwell sanitary areas. The 17 fatal cases of *whooping-cough* showed an increase of 2 upon the low number in the previous week, but were 19 below the corrected average. The deaths attributed to *diarrhoea* and *dysentery*, which had ranged in the twelve preceding weeks from 192 to 18, further declined last week to 16, and were 3 below the corrected average.

The deaths referred to *enteric fever*, which had been 22 and 14 in the two preceding weeks, were last week 15, and were 12 below the corrected average; 2 belonged to Kensington, and 3 to Islington sanitary areas. The Metropolitan Asylum Hospitals contained 80 cases of enteric fever, and 2 of typhus, on Saturday last; 11 cases of enteric fever were admitted during the week, against 7 and 9 in two previous weeks.

A woman, formerly an umbrella coverer, died on 14th instant, in Albert Road, Hackney, whose age was stated to be 101 years.

The deaths referred to diseases of the respiratory organs, which had been 522, 441, and 373 in the three preceding weeks, were last week 374, and were 61 below the corrected average.

Different forms of violence caused 60 deaths; 55 were the result of negligence or accident, among which were 21 from fractures and contusions, 12 from burns and scalds, and 14 of infants under one year of age from suffocation. The 21 deaths from fractures and contusions were thus caused:—7 by accidents from horses and vehicles in street; 3 by accidents on railway; 2 by fall down stairs; 1 by fall from loft; 1 by fall into ship's hold; 1 by fall from rigging; 1 by fall, the nature of which was not stated; 1 by injuries received from fall of barrow, 1 by being thrown from window during conflagration; 1 by injuries received from breaking of crane; and 2 by fracture, the cause of which was not stated. An inquest was held in each of these 21 cases. A death in Newgate prison was the result of execution. Three cases of suicide were registered, the corrected average being 8.

#### GREATER LONDON.

In Greater London 3394 births and 2028 deaths were registered, corresponding to annual rates of 32·0 and 19·1 per 1000 of the estimated population. In the Outer Ring 12 deaths from measles, 7 from diphtheria, 5 from "fever", and 4 from scarlet fever, were registered. Three fatal cases of scarlet fever and 3 of measles occurred in West Ham sub-district, and 2 of measles and 2 of diphtheria in Enfield sub-district.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·72 ins.; the lowest reading was 29·23 ins. on Tuesday morning, and the highest 30·01 ins. on Thursday evening. The mean temperature of the *air* was 50°·5, and 8°·3 above the average in the corresponding weeks of the 20 years ending 1868. The mean considerably exceeded the average on each day of the week, the warmest days being Thursday and Friday. The general direction of the *wind* was Southerly, and the horizontal movement of the air averaged 14·8 miles per hour, which was 2·7 miles above the average in the corresponding weeks of 16 years. *Rain* fell on four days of the week, to the aggregate amount of 0·40 of an inch. The duration of registered bright sunshine in the week was 8·6 hours, against 7·4 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylum Hospital, outside Registration London (see Table 3).

† The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.748 per cent. for increase of population.

‡ As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

§ Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When no medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered medical practitioner, the case is returned under the heading "no statement."

|| The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, during the Week ending

NOTES.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it stands; note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts—G.J. signifying Grand Junction Company; W.M. West Middlesex; C. Chelsea; S. Southwark and Vauxhall; L. Lambeth; N. R. New River; E. L. East London and K. the Kent Company.

The height of the cistern of the barometer is 159 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1888 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metric Tables.

The average temperature of the air is that derived from a discussion of the photographic records at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Office Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The recording of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: +, E. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 26 derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The readings of the barometer increased to 29.61 in. by 9h. A.M. on the 13th; increased to 29.91 in. by 3h. P.M. on the 14th; decreased to 29.35 in. by 9h. A.M. on the 15th; increased to 29.98 in. by 3h. P.M. on the 16th; decreased to 29.39 in. by noon on the 17th.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

*Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 3, EAST HARDING ST., FETTER LANE, E.C.*

No. 47. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, NOVEMBER 24. [Price 1½d.

General Register Office, Somerset House,  
26th November, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 18·2 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |             |             |             | TOWNS.               | Weeks ending |             |             |             |

| Huddersfield | 23·4         | 23·4        | 20·0        | 17·1        | Salford* -           | 21·7         | 20·3        | 18·0        | 20·3        |
| Hull -       | 17·0         | 12·9        | 16·8        | 12·4        | Sheffield -          | 22·2         | 16·1        | 20·1        | 16·2        |
| Leeds -      | 19·5         | 18·6        | 21·1        | 21·8        | Sunderland -         | 21·0         | 19·4        | 21·4        | 18·6        |
| Leicester*   | 19·9         | 14·6        | 14·9        | 13·2        | Wolverhampton -      | 17·2         | 14·0        | 24·3        | 14·0        |

The highest annual death-rates, measured by last week's mortality, were:—from *measles*, 1·8 in Leeds, 2·6 in Liverpool, 3·0 in Oldham, 3·4 in Cardiff, and 4·8 in Blackburn; from *scarlet fever*, 1·3 in Sheffield, 1·6 in Derby, and 2·2 in Blackburn; from *whooping-cough*, 1·3 in Newcastle-upon-Tyne and 1·9 in Cardiff; and from "*fever*," 1·6 in Birkenhead. The 57 deaths from *diphtheria* in the twenty-eight towns included 41 in London, 6 in Manchester, 3 in Salford, and 2 in Newcastle-upon-Tyne. *Small-pox* caused one death in Cardiff, but not one in London or in any of the twenty-six other great towns.

### LONDON.

In LONDON† 2722 BIRTHS and 1409 DEATHS were registered. Allowing for increase of population, the births exceeded by 12, while the deaths were 370 below, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 19·7, 18·5, and 19·7 in the preceding three weeks, fell last week to 17·2. During the first eight weeks of the current quarter the death-rate averaged 18·9 per 1000, and was 1·0 below the mean rate in the corresponding periods of the ten years 1878–87.

The 1409 deaths included 133 from measles, 20 from scarlet fever, 41 from diphtheria, 19 from whooping-cough, one from typhus, 15 from enteric fever, one

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

from an ill-defined form of continued fever, 18 from diarrhoea and dysentery, and not one from small-pox or cholera; thus, 248 deaths were referred to these diseases, being 27 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 9; and no small-pox patients were under treatment either in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital, during the week. The deaths from *measles*, which had risen from 88 to 124 in the previous three weeks, further increased to 133 last week, and exceeded the corrected average by 85; 9 belonged to the sanitary area of Kensington, 14 to Pancras (including 2 at 65, Little Albany Street, and 2 in Stanhope Street, the latter being returned, after inquest, as due to measles accelerated by vaccination performed three weeks previously to the attacks), 17 to Islington (including 2 at 18, Hatley Road, and 2 at 107, Wynford Road), 7 to Shoreditch, 6 to Bethnal Green, 11 to Mile End Old Town, 6 to Battersea (including 2 at 12, Sussex Street), and 9 to Wandsworth (including 2 at 16, Lower Grove). The fatal cases of *scarlet fever*, which had numbered 24, 18, and 31 in the preceding three weeks, were 20 last week, and 36 below the corrected average; 2 belonged to Hackney, 2 to Shoreditch, 2 to Lambeth, and 5 to Camberwell sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 953 scarlet fever patients, against 969 and 980 in the preceding two weeks; 59 cases were admitted during the week, against 85 and 83 in the previous two weeks. The deaths from *diphtheria*, which had increased from 31 to 44 in the preceding four weeks, were 41 last week, exceeding the corrected average by 18; 2 belonged to Hammersmith, 2 to St. George Hanover Square, 4 to Westminster, 2 to Hackney, 4 to Bethnal Green, 3 to Stepney, 4 to Poplar, 2 to St. Saviour Southwark, 3 to Lambeth, and 3 to Camberwell sanitary areas. The deaths from *whooping-cough*, which had been 19, 15, and 17 in the previous three weeks, were 19 last week, and were 19 below the corrected average; 3 belonged to Paddington sanitary area. The deaths attributed to *diarrhoea* and *dysentery* corresponded with the corrected average, though slightly exceeding the number in the previous week.

The deaths referred to *enteric fever*, which had been 22, 14, and 15 in the preceding three weeks, were again 15 last week, and 9 below the corrected average; 2 belonged to Poplar sanitary area. There were 78 cases of enteric fever, and one of typhus, under treatment in the Metropolitan Asylum Hospitals on Saturday last; 11 cases of enteric fever having been admitted during the week, against 7, 9, and 11 in the preceding three weeks.

The deaths referred to diseases of the respiratory organs, which had fallen from 522 to 374 in the previous four weeks, further fell last week to 287, and were 198 below the corrected average.

An errand boy, of Barnes, aged 14 years, died in the West London Hospital, the cause of death being returned by the coroner as "Injury, causing hydrophobia."

Different forms of violence caused 43 deaths; 36 were the result of negligence or accident, among which were 11 from fractures and contusions, 8 from burns and scalds, 2 from drowning, and 14 of infants under one year of age from suffocation. The 11 deaths from fractures and contusions were thus caused:—4 by accidents from vehicles in the street; 1 by accident on railway; 3 by fall down stairs and otherwise; 2 by fall of heavy substances; and 1 by fracture, the nature of which was not stated. An inquest was held in each of these cases. Six cases of suicide were recorded, corresponding with the average.

#### GREATER LONDON.

In Greater London 3536 births and 1756 deaths were registered, corresponding to annual rates of 33·3 and 10·6 per 1000 of the estimated population. In the Outer Ring 29 deaths from measles, 6 from diphtheria, 4 from whooping-cough, 3 from "fever", and 3 from scarlet fever, were registered. Fifteen fatal cases of measles occurred in West Ham, 4 in Tottenham, and 2 in Sunbury sub-districts; 2 deaths from diphtheria were recorded in Godstone, and 2 from whooping-cough in Tottenham sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·87 ins.; the lowest reading was 29·61 ins. on Tuesday morning, and the highest 30·06 ins. on Friday evening. The mean temperature of the *air* was 49°·0, and 7°·8 above the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably above the average on each day of the week, the excess on Friday and Saturday being upwards of 11°. The general direction of the *wind* was W.S.W., and the horizontal movement of the air averaged 24·7 miles per hour, which was 12·2 miles above the average in the corresponding weeks of 16 years. *Rain* fell on two days of the week, to the aggregate amount of 0·11 of an inch. The duration of registered bright sunshine in the week was 6·2 hours, against 5·1 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospitals, outside Registration London (see Table 5).  
 \* The numbers in this column are the average weekly Deaths for the ten years 1878-87, raised by 9.046 per cent. for increase of population.  
 † As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.  
 ‡ Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."  
 § The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, during the Week ending

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—Workhouse; H—Hospital; L—Lunatic Asylum; w—A Workhouse Establishment receiving inmates from other Districts than that in which it is situated; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., the Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N.R., New River; E.L., East London and Kentish Company.

MR. DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
day, the 24th November, 1888.

|   |    |   |           |                                |             | Sum   |                   | Sum   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The height of the cistern of the barometer is 139 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.  |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | Observations are usually taken at 9h. A.M.; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hydro-metrical Tables. |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1868, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.  |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.  |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |
|   |    |   |           |                                |             |   |                   | The reading of the barometer increased from 29.83 in. at the beginning of the week to 29.87 in. at the end of the week, and the 25th barometer was increased to 29.96 in.   |        |                           |                          |                    |            |                                   |             |                    |                  |  |                  |   |    |    |    |    |    |

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 48. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, DECEMBER 1. [Price 1½d.

General Register Office, Somerset House,  
3rd December, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 17·8 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |             |             |            | TOWNS.             | Weeks ending |             |             |            |

The highest annual death-rates, measured by last week's mortality, were:—from *measles*, 1·7 in London and in Huddersfield, 1·9 in Oldham, 2·1 in Leeds, 3·3 in Liverpool, 4·8 in Blackburn, and 8·6 in Cardiff; from *scarlet fever*, 1·3 in Blackburn; and from "*fever*," 1·0 in Birkenhead, 1·1 in Oldham, and 1·3 in Halifax. The death-rate from *whooping-cough* did not reach 1·0 per 1000 in any of the twenty-eight towns. The 53 deaths from *diphtheria* in these towns included 34 in London, 8 in Manchester, 3 in Liverpool, 2 in Nottingham, and 2 in Oldham. Two deaths from *small-pox* were registered in Cardiff, and one in Sheffield, but not one in London or in any of the twenty-five other great towns. The death from small-pox in Sheffield occurred on 20th December 1887, but was not registered until last week.

## LONDON.

In LONDON† 2367 BIRTHS and 1352 DEATHS were registered. Allowing for increase of population, the births were 372, and the deaths 412, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 19·7 and 17·2 in the two preceding weeks, further declined last week to 16·5. During the first nine weeks of the current quarter the death-rate averaged 18·7 per 1000, and was 1·4 below the mean rate in the corresponding periods of the ten years 1878–87.

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

The 1352 deaths included 141 from measles, 24 from scarlet fever, 34 from diphtheria, 20 from whooping-cough, 11 from enteric fever, 1 from an undefined form of continued fever, 13 from diarrhoea and dysentery, 1 from cholera, and not one from small-pox or from typhus; thus, 245 deaths were referred to these diseases, being 22 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 10; and no small-pox patients were under treatment during the week in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital. The fatal cases of *measles*, which had increased in the four preceding weeks from 88 to 133, further rose last week to 141, and exceeded the corrected average by 86; 7 belonged to Kensington, 7 to Chelsea, 8 to Pancras, 16 to Islington, 7 to Shoreditch, 12 to Bethnal Green (including 3 at 28, Charlotte Buildings), 8 to Mile End Old Town, 14 to Lambeth, and 7 to Battersea sanitary areas. The deaths from *scarlet fever*, which had been 18, 31, and 20 in the three previous weeks, were 24 last week, and were 32 below the corrected average; 3 belonged to St. Luke's, 2 to Shoreditch, 2 to Whitechapel, 3 to Poplar, and 4 to Camberwell sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 946 scarlet fever patients, against 980 and 953 in the two preceding weeks; 96 cases were admitted during the week, against 83 and 59 in the two previous weeks. The fatal cases of *diphtheria*, which had been 44 and 41 in the two preceding weeks, further declined last week to 34, but exceeded the corrected average by 16; 2 belonged to Kensington, 3 to Hammersmith, 4 to St. George Hanover Square, 4 to Westminster, 3 to Bethnal Green, and 5 to Lambeth sanitary areas. The 20 deaths from *whooping-cough* showed a further slight increase upon the low numbers in recent weeks, but were 20 below the corrected average; 4 belonged to Lambeth sanitary area. The deaths attributed to *diarrhoea* and *dysentery*, which had been 16 and 18 in the two previous weeks, declined last week to 13, and were one below the corrected average. The death of a child, aged 5 months, was referred to *cholera infantum*.

The deaths referred to *enteric fever*, which had been 15 in each of the two preceding weeks, declined last week to 11, and were 14 below the corrected average; 2 belonged to Islington and 2 to Bethnal Green sanitary area. The death of a male aged 59 years in Kensington was indefinitely referred to *continued fever*. The Metropolitan Asylum Hospitals contained 77 cases of enteric fever and 1 of typhus on Saturday last; 7 cases of enteric fever were admitted during the week, against 11 in each of the two previous weeks.

The deaths referred to diseases of the respiratory organs, which had declined in the five preceding weeks from 522 to 287, further fell last week to 258, and were 227 below the corrected average.

Different forms of violence caused 54 deaths; 47 were the result of negligence or accident, among which were 20 from fractures and contusions, 8 from burns and scalds, 3 from drowning, and 10 of infants under one year of age from suffocation. The 20 deaths from fractures and contusions were thus caused:—4 by accidents from vehicles in street; 1 by accident on railway; 1 by fall from scaffold; 1 by fall from ladder; 1 by fall in street; 7 by fall down stairs or steps; 1 by fall into area; 1 by fall out of bed; 1 by fall into bone-crushing machine; 1 by fall, the nature of which was not stated; and 1 by fall of deals. An inquest was held in each of these 20 cases. Six cases of suicide were registered, corresponding with the corrected average.

#### GREATER LONDON.

In Greater London 3068 births and 1678 deaths were registered, corresponding to annual rates of 29·0 and 15·8 per 1000 of the estimated population. In the Outer Ring 16 deaths from measles, 7 from diphtheria, and 5 from whooping-cough, were registered. Seven fatal cases of measles occurred in West Ham sub-district, and 2 of diphtheria in Willesden and in Tottenham sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·37 ins.; the highest reading was 29·91 ins. at the beginning of the week, and the lowest 29·07 ins. on Tuesday afternoon. The mean temperature of the *air* was 45°·7, and 4°·7 above the average in the corresponding weeks of the 20 years ending 1868. The mean showed an excess on each day of the week, except on Saturday, when it corresponded with the average. The direction of the *wind* was variable, and the horizontal movement of the *air* averaged 15·3 miles per hour, which was 2·9 miles above the average in the corresponding weeks of 16 years. *Rain* fell on six days of the week, to the aggregate amount of 1·77 of an inch. The duration of registered bright sunshine in the week was 6·0 hours, against 6·2 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylum Hospitals, outside Registration London (see Table 5).

\* The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.04 per cent. for increase of population.

† As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

‡ These cases of small-pox only are returned as "vaccinated," or as "unvaccinated," which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."

§ The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, during the Week ending

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: W—W. House; H—Hospital; L—Lunatic Asylum; W—A Workhouse Establishment receiving inmates from other Districts than that in which it stands; see note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—G.J., Grand Junction Company; W.M., West Middlesex; C., Chelsea; S., Southwark and Vauxhall; L., Lambeth; N. R., New River; E. L., East London and Kent Company.

ER, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT  
Friday, the 1st December, 1888.

The height of the cistern of the barometer is 159 feet above the mean level of the sea; no observation has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 8h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1888 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 10 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of each of the jetties of the Foreign Office, Market at Deptford, and Corporation of London. The readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbol employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. very.

The numbers in column 23 derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 49. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, DECEMBER 8. [Price 1½d.

General Register Office, Somerset House,  
10th December, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 18·6 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000 :—

| TOWNS.       | Weeks ending |             |            |            | TOWNS.             | Weeks ending |             |            |            |

| Halifax -    | 18·9         | 24·7        | 21·5       | 18·2       | Preston -          | 19·7         | 21·2        | 18·2       | 14·7       |
| Huddersfield | 20·0         | 17·1        | 18·3       | 18·8       | Salford* -         | 18·0         | 20·3        | 14·8       | 18·0       |
| Hull -       | 16·8         | 12·4        | 13·2       | 14·7       | Sheffield -        | 20·1         | 16·2        | 17·7       | 17·8       |
| Leeds -      | 21·1         | 21·8        | 20·8       | 20·2       | Sunderland -       | 21·4         | 18·6        | 17·4       | 13·1       |
| Leicester*   | 14·9         | 13·2        | 13·9       | 22·0       | Wolverhampton -    | 24·3         | 14·0        | 16·6       | 16·6       |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·7 in London, 1·8 in Leicester, 2·6 in Portsmouth, 2·7 in Leeds, 3·0 in Oldham, 3·2 in Salford, 3·8 in Liverpool, 4·8 in Blackburn, and 7·7 in Cardiff; from *scarlet fever*, 1·0 in Liverpool and in Sheffield, 1·6 in Derby, and 2·2 in Blackburn; from *whooping-cough*, 1·0 in Birmingham and 1·9 in Cardiff; and from "*fever*," 1·0 in Cardiff and 1·6 in Salford. The 48 deaths from *diphtheria* in these towns included 35 in London, 3 in Nottingham, 2 in Birmingham, 2 in Salford, and 2 in Newcastle-upon-Tyne. No death from *small-pox* was registered in any of the twenty-eight great towns.

### LONDON.

In LONDON† 2644 BIRTHS and 1461 DEATHS were registered. Allowing for increase of population, the births were 41, and the deaths 357, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 17·2 and 16·5 in the two preceding

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

weeks, rose last week to 17·8. During the first ten weeks of the current quarter the death-rate averaged 18·6 per 1000, and was 1·7 below the mean rate in the corresponding periods of the ten years 1878-87.

The 1461 deaths included 139 from measles, 30 from scarlet fever, 35 from diphtheria, 13 from whooping-cough, one from typhus, 12 from enteric fever, 19 from diarrhœa and dysentery, and not one from small-pox, ill-defined forms of continued fever, or cholera; thus, 249 deaths were referred to these diseases, being 24 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 10; and no small-pox patients were under treatment during the week in the Metropolitan Asylum Hospitals, or in the Highgate Small-pox Hospital. The fatal cases of *measles*, which had steadily increased in the five preceding weeks from 88 to 141, were last week 139, and exceeded the corrected weekly average by 83; 10 belonged to Pancras, 13 to Islington, 18 to Bethnal Green, 6 to Mile End Old Town, 16 to Lambeth, and 8 to Battersea sanitary areas. The deaths from *scarlet fever*, which had been 31, 20, and 24 in the three previous weeks, rose again last week to 30, but were 20 below the corrected average; 3 belonged to Islington, 3 to Bethnal Green, 2 to Mile End Old Town, 3 to Poplar, 3 to Bermondsey, 3 to Lambeth, 2 to Wandsworth, and 2 to Camberwell sanitary areas. At the end of the week the Metropolitan Asylum and the London Fever Hospitals contained 922 scarlet fever patients, against 980, 953, and 946 in the three preceding weeks; 79 cases were admitted during the week, against 59 and 96 in the two previous weeks. The fatal cases of *diphtheria*, which had been 44, 41, and 34 in the three previous weeks, were last week 35, and exceeded the corrected average by 14; 4 belonged to Kensington, 4 to Bethnal Green, and 3 to Lambeth sanitary areas. The 13 deaths from *whooping-cough* showed a decline of 7 from the number in the previous week, and were 35 below the corrected average. The 19 deaths attributed to *diarrhœa* exceeded the number in the previous week by 6, and were 4 above the corrected average.

The deaths referred to *enteric fever*, which had been 15 and 11 in the two previous weeks, were last week 12, and were 11 below the corrected average; 3 belonged to Kensington, and 2 to Hackney sanitary areas. The death of a woman, aged 23 years, at 31, Uppern Road, Chelsea, was referred to "miscarriage, typhus fever, 12 days." The Metropolitan Asylum Hospitals contained 81 cases of enteric fever, and 1 of typhus on Saturday last; 8 cases of enteric fever were admitted during the week, against 11 and 7 in the two previous weeks.

The deaths referred to diseases of the respiratory organs, which had declined in the six preceding weeks from 522 to 258, were last week 277, and were 210 below the corrected average.

Different forms of violence caused 62 deaths; 56 were the result of negligence or accident, among which were 17 from fractures and contusions, 5 from burns and scalds, 4 from drowning, and 20 of infants under one year of age from suffocation. The 17 deaths from fractures and contusions were thus caused:—2 by accidents from vehicles in streets; 1 by accident on railway; 1 by fall into hole; 1 by fall in street; 1 by fall into area; 1 by fall from chair; 1 by fall down stairs; 6 by fall of building in course of erection; 1 by fall of wood; 1 by injury from iron shutter; and 1 by fracture, the nature of which was not stated. An inquest was held in each of these 17 cases. Five cases of suicide were registered, corresponding with the corrected average.

#### GREATER LONDON.

In Greater London 3494 births and 1764 deaths were registered, corresponding to annual rates of 33·0 and 16·7 per 1000 of the estimated population. In the Outer Ring 12 deaths from measles, 9 from diphtheria, 4 from scarlet fever, and 4 from "fever," were registered. Measles caused 5 deaths in West Ham and 3 in Willesden sub-districts. Two deaths from scarlet fever occurred in Enfield, and 4 from diphtheria and 3 from "fever" in Tottenham sub-districts.

---

Professor Frankland's report upon the quality of the water supplied by the various companies to the Metropolitan area during November will be found on pages 505-506.

---

## METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·91 ins.; the lowest reading was 29·75 ins. at the beginning of the week, and the highest 30·06 ins. on Thursday morning. The mean temperature of the *air* was 49°·1, and 6°·7 above the average in the corresponding weeks of the 20 years ending 1868. The mean showed an excess throughout the week; the warmest day was Wednesday, when the mean was 53°·0 and exceeded the average by 10°·4. The general direction of the *wind* was S.S.W., and the horizontal movement of the air averaged 12·7 miles per hour, which was 0·1 mile above the average in the corresponding weeks of 16 years. *Rain* fell on three days of the week, to the aggregate amount of 0·17 of an inch. The duration of registered bright sunshine in the week was 11·5 hours, against 9·3 hours at Glynde Place, Lewes.

THE REGISTRAR GENERAL has to acknowledge the courtesy of the LONDON WATER COMPANIES who have furnished him with the average daily quantity of Water supplied during the month of NOVEMBER 1888; according to their returns 157,969,825 gallons or 717,729 cubic metres of water (equal to about as many *tuns* by measure, *tons* by weight,) were supplied daily; or 212 gallons 96·3 decalitres), being rather less than a *ton* by weight, to each house, and (assuming 7·8 persons to each house) 27·2 gallons (12·4 decalitres) to each person, against 27·1 gallons in November 1887.

*Note.*—The Return for November 1888, as compared with that for the corresponding month of 1887, shows an increase of 13,542 houses, and of 3,187,520 gallons of water supplied daily.

## ANALYSIS OF METROPOLITAN WATER SUPPLY DURING NOVEMBER.

Grove House, Pembroke Square, W.,  
7th December, 1888.

SIR, I HAVE to report to you in the following Table the results of the chemical analyses of the waters supplied to the inner, and portions of the outer, circle of the Metropolis during the month of November.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity contained in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Tottenham 0·7, Kent 0·8, Colne Valley 1·4, New River 2·3, Grand Junction 3·6, Chelsea 3·9, Southwark 4·1, East London 4·4, West Middlesex 4·6, and Lambeth 4·7.

The Thames water sent out by the Chelsea, West Middlesex, Southwark, Grand Junction, and Lambeth Companies contained, as is usual at this season of the year, a markedly increased quantity of organic matter, as compared with that in the samples of some months past. The increase was least conspicuous in the case of the Grand Junction Company's water. Notwithstanding this increased proportion of organic matter in the river-water, all the samples were clear and bright on delivery.

The water principally derived from the River Lea, and distributed by the New River and East London Companies exhibited a corresponding increase of organic matter, the actual proportion present in the New River Company's water was, however, less than in any of the other river supplies. Both samples were clear and bright.

The deep-well waters of the Kent and Colne Valley Companies and of the Tottenham Local Board of Health contained, as usual, only a very small proportion of organic matter. The

Colne Valley Company's water was softened by treatment with lime before delivery, although the softening had not been carried as far as usual.

Seen through a stratum two feet deep, the waters presented the following appearances:—Kent, Colne Valley, and Tottenham, clear and colourless; New River, clear and very pale yellow; Chelsea, West Middlesex, Southwark, Grand Junction, Lambeth, and East London, clear and pale yellow.

Dr. Hill, F.I.C., the Medical Officer of Health for Birmingham, reports that the water supplied to that town "contained less organic matter than any sample during the year."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College reports that the water supplied to that city from Loch Katrine was "light brown in colour and contained a little suspended matter."

The Registrar General, &c. &c.

I am, &c.

E. FRANKLAND.

\* Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the Borough.

† Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the water. The Table is to be read thus:—the Chelsea Company's water, collected on the 28th November at the Victoria St. cab-rank, had a temperature of 13°·0 C.; 100,000 lbs. of it contained 28·74 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained ·201 lb. of carbon and ·030 lb. of nitrogen. The above quantity of water also contained no ammonia, and ·200 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was ·230 lb. The above weight of water also contained 1·8 lbs. of chlorine; and 19·7 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

\*The deaths include those of London residents in the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

## METEOROLOGICAL OBSERVATIONS. (See TABLE 1.)

The following gentlemen have kindly placed their meteorological observations at the disposal of the Registrar General, and the results have been compiled by J. Glaisher, Esq., F.R.S.:—F. E. Sawyer, Esq., F.S.A., F.R.Met.Soc., Brighton; John Merrifield, Esq., I.L.D., Plymouth; R. C. Cann Lippincott, Esq., Bristol; E. Simpson, Esq., Wrotesley, Wolverhampton; Henry Tomkins, Esq., M.D., Leicester; Arthur Brown, Esq., and B. A. Whitelegg, Esq., M.D., Nottingham; J. Hartnup, Esq., F.R.A.S., Liverpool; H. O. Pilkington, Esq., M.R.C.S., Preston; J. Melandborough, Esq., F.G.S., F.R.Met.Soc., Bradford; Mr. F. Peak, Hull; A. E. Harris, Esq., L.R.C.P., F.R.G.S., Medical Officer of Health, Sunderland; and Wm. Lyall, Esq., Newcastle-on-Tyne.

### ES OF DEATH.

The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums, outside Registration London (see Table 5).

The figures in this column are the average weekly deaths for the ten years 1878-87, raised by 9.04 per cent. for increase of population. Ten years average could not be correctly ascertained, the average for the years 1871-87 has been used.

Small-box only are returned as "vaccinated" or as "unvaccinated" which are not registered medical men. When the cause is returned under the heading "no statement," it means that the cause of death is not certified by a registered medical man.

Deaths as infants is often used falsely to enable the Coroner to justify whether a violent death be the result of accident, murder, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS from ALL CAUSES, and from SMALL-POX, MEASLES, &amp;c. during the Week ending

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,  
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 50. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, DECEMBER 15. [Price 1½d.

General Register Office, Somerset House,  
17th December, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 18·9 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending. |            |            |             | TOWNS.             | Weeks ending. |            |            |             |

| Huddersfield | 17·1          | 18·3       | 18·8       | 20·5        | Salford*           | 20·3          | 14·8       | 18·0       | 18·0        |
| Hull -       | 12·4          | 13·2       | 14·7       | 14·2        | Sheffield -        | 16·2          | 17·7       | 17·8       | 18·0        |
| Leeds -      | 21·8          | 20·8       | 20·2       | 22·9        | Sunderland -       | 18·6          | 17·4       | 13·1       | 16·2        |
| Leicester*   | 13·2          | 13·9       | 22·0       | 16·7        | Wolverhampton -    | 14·0          | 16·6       | 16·6       | 16·6        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·9 in London, 2·1 in Salford, 2·2 in Leeds and in Portsmouth, 2·6 in Oldham, 2·9 in Liverpool, 3·8 in Cardiff, and 4·4 in Blackburn; from *scarlet fever*, 1·1 in Derby, and 1·8 in Blackburn; from *whooping-cough*, 1·1 in Bradford, 1·3 in Birmingham, Leeds, and Blackburn, and 2·4 in Cardiff; and from "*fever*," 1·6 in Salford. The 53 deaths from *diphtheria* in the twenty-eight towns included 39 in London, 6 in Manchester, 3 in Liverpool, 2 in Salford, and 2 in Portsmouth. *Small-pox* caused one death in Hull, and one in Cardiff, but not one in London or in any of the twenty-five other great towns.

## LONDON.

In LONDON† 2291 BIRTHS and 1455 DEATHS were registered. Allowing for increase of population, the births were 452, and the deaths 404, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 16·5 and 17·8 in the two preceding weeks, were last week 17·7. During the first eleven weeks of the current quarter the death-rate averaged 18·5 per 1000, and was 2·1 below the mean rate in the corresponding periods of the ten years 1878-87.

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

The 1455 deaths included 154 from measles, 17 from scarlet fever, 39 from diphtheria, 14 from whooping-cough, 18 from enteric fever, 11 from diarrhoea and dysentery, and not one from small-pox, typhus, ill-defined forms of continued fever, or cholera; thus, 253 deaths were referred to these diseases, being 20 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 14. No small-pox patients were under treatment during the week in the Metropolitan Asylum Hospitals, and only one in the Highgate Small-pox Hospital. The death of an infant, aged 4 months, in Chelsea, was attributed to varicella. The fatal cases of *measles*, which had been 141 and 139 in the two preceding weeks, rose last week to 154, and exceeded the corrected weekly average by 97; 10 belonged to Pancras, 13 to Islington, 7 to St. Luke's, 9 to Shoreditch, 11 to Bethnal Green, 8 to Poplar, 11 to St. Saviour Southwark, 14 to Lambeth, 11 to Battersea, and 13 to Camberwell sanitary areas. The deaths from *scarlet fever*, which had been 24 and 30 in the two preceding weeks, declined last week to 17, and were 31 below the corrected average; 2 belonged to Hackney, 2 to St. Luke's, 2 to Bethnal Green, and 2 to Poplar sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 880 scarlet fever patients, against numbers declining in the four preceding weeks from 980 to 922; 76 cases were admitted during the week, against 96 and 79 in the two previous weeks. The fatal cases of *diphtheria*, which had been 34 and 35 in the two previous weeks, further rose last week to 39 (including 5 cases admitted to hospital from outside Registration London), and exceeded the corrected average by 20; 2 belonged to Paddington, 4 to Kensington, 2 to St. Luke's, 7 to Lambeth, 7 to Wandsworth (including 5 in Clapham sub-district), and 2 to Camberwell sanitary areas. The 14 fatal cases of *whooping-cough* showed an increase of one upon the number in the previous week, but were 43 below the corrected average; 8 belonged to South London. The 11 deaths attributed to *diarrhoea* showed a further decline from the numbers in recent weeks, and were one below the corrected average.

The deaths referred to *enteric fever*, which had been 11 and 12 in the two previous weeks, further rose last week to 18, but were 3 below the corrected average; 2 belonged to Pancras, 2 to Hackney, 2 to Greenwich, and 2 to Lewisham sanitary areas. The Metropolitan Asylum Hospitals contained 74 cases of enteric fever, and one of typhus on Saturday last; 5 cases of enteric fever were admitted during the week, against 11, 7, and 8 in the three previous weeks.

The deaths referred to diseases of the respiratory organs, which had been 258 and 277 in the two preceding weeks further rose last week to 330, but were 211 below the corrected average.

Different forms of violence caused 40 deaths; 33 were the result of negligence or accident, among which were 10 from fractures and contusions, 7 from burns and scalds, 6 from drowning, and 6 of infants under one year of age from suffocation. The 10 deaths from fractures and contusions were thus caused:—1 by accident from vehicle in street; 1 by accident on railway; 2 by fall into barge; 1 by fall from boy's arms; 1 by fall in room; 2 by fall down stairs; 1 by fall of roof; and 1 by explosion of boiler. An inquest was held in each of these 10 cases. Five cases of suicide were registered, the corrected average being 7.

#### GREATER LONDON.

In Greater London 2891 births and 1817 deaths were registered, corresponding to annual rates of 27·3 and 17·2 per 1000 of the estimated population. In the Outer Ring 22 deaths from measles, and 5 from diphtheria were registered. The fatal cases of measles included 8 in West Ham and 4 in Croydon sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 30·14 ins.; the lowest reading was 29·89 ins. at the beginning of the week, and the highest 30·25 ins. at the end of the week. The mean temperature of the *air* was 33°·3, and 8°·8 below the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably below the average on each day of the week; the deficiency of temperature was 11°·7 on Monday, and 10°·3 both on Tuesday and on Thursday. The general direction of the *wind* was S.E., and the horizontal movement of the air averaged 4·6 miles per hour, which was 8·2 miles below the average in the corresponding weeks of 16 years. No rain was measured during the week. The duration of registered bright sunshine in the week was 3·8 hours, against 21·2 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospitals, outside Registration London (see Table 5).  
 \* The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.043 per cent. for increase of population.  
 † As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.  
 ‡ Those cases of small-pox only are returned as "vaccinated," or as "unvaccinated," which are so certified by registered medical men. When the medical attendant does not certify that the disease has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, this case is returned under the heading "no statement."  
 § This column as in justice is often inserted to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, during the Week ending

NOTE.—The Italic letters placed against the names of the sub-districts denote Public Institutions situated therein, namely: *W*—Workhouse; *H*—Hospital; *L*—Lunatic Asylum; *w*—A Workhouse Establishment receiving inmates from other Districts than that in which it is situated; *see* note at the foot of next page. The Roman capitals signify the Water Companies which supply the different sub-districts:—*G.J.* signifies Grand Junction Company; *W.M.* West Middlesex; *C.* Chelsea; *N.* Southwark and Vauxhall; *L.* Lambeth; *N.R.* New River; *E.L.* East London and K. the Kent Company.

R, DIPHTHERIA, WHOOPING-COUGH, FEVER, DIARRHŒA, VIOLENCE, &c., registered in each SUB-DISTRICT day, the 15th December, 1888.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,

AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 51. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, DECEMBER 22. [Price 1½d.

General Register Office, Somerset House,  
24th December, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 22·2 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |            |             |             | TOWNS.             | Weeks ending |            |             |             |

| Cardiff*     | 27·9         | 29·8       | 25·0        | 32·2        | Plymouth - -       | 19·5         | 24·8       | 17·5        | 24·2        |
| Derby -      | 16·8         | 9·2        | 17·9        | 13·6        | Portsmouth -       | 14·2         | 16·1       | 18·7        | 17·2        |
| Halifax -    | 21·5         | 18·2       | 11·7        | 15·0        | Preston - -        | 18·2         | 14·7       | 21·2        | 24·3        |
| Huddersfield | 18·3         | 18·8       | 20·5        | 20·5        | Salford* - -       | 14·8         | 18·0       | 18·0        | 23·3        |
| Hull - -     | 13·2         | 14·7       | 14·2        | 18·1        | Sheffield - -      | 17·7         | 17·8       | 18·0        | 19·9        |
| Leeds -      | 20·8         | 20·2       | 22·9        | 21·2        | Sunderland -       | 17·4         | 13·1       | 16·2        | 26·5        |
| Leicester*   | 13·9         | 22·0       | 16·7        | 23·5        | Wolverhampton -    | 16·6         | 16·6       | 16·6        | 33·8        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 2·1 in Manchester and in Bristol, 2·2 in London, 3·0 in Oldham, 3·2 in Liverpool and in Salford, 3·5 in Blackburn, and 3·8 in Cardiff; from *scarlet fever*, 1·1 in Derby, 1·5 in Sheffield, and 2·2 in Blackburn; from *whooping-cough*, 2·0 in Preston, 2·2 in Blackburn, 2·3 in Birmingham, and 2·4 in Cardiff; and from "*fever*," 1·0 in Birkenhead, 1·1 in Norwich, 1·2 in Sunderland, and 2·0 in Plymouth. The 62 deaths from *diphtheria* in the twenty-eight towns included 39 in London, 8 in Manchester, 4 in Salford, and 2 in Nottingham. *Small-pox* caused no death in London, or in any of the twenty-seven other great towns.

## LONDON.

In LONDON† 2655 BIRTHS and 1802 DEATHS were registered. Allowing for increase of population, the births exceeded by 29, whereas the deaths were 45 below, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 16·5, 17·8, and 17·7 in the three preceding weeks, rose last week to 22·0. During the first twelve weeks of the current quarter the death-rate averaged 18·8 per 1000, and was 1·9 below the mean rate in the corresponding periods of the ten years 1878–87.

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

The 1802 deaths included 184 from measles, 25 from scarlet fever, 39 from diphtheria, 25 from whooping-cough, 12 from enteric fever, 16 from diarrhœa and dysentery, and not one from small-pox, typhus, ill-defined forms of fever, or cholera; thus, 301 deaths were referred to these diseases, being 61 above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 10. No small-pox patients were under treatment during the week in the Metropolitan Asylum Hospitals, and only one in the Highgate Small-pox Hospital. The fatal cases of *measles*, which had been 139 and 154 in the two preceding weeks, further rose last week to 184, and exceeded the corrected average by 124; 11 belonged to Marylebone, 14 to Pancras, 11 to Islington, 9 to St. Luke's, 13 to Bethnal Green, 26 to Lambeth, 12 to Battersea, and 12 to Camberwell sanitary areas. The deaths from *scarlet fever*, which had been 30 and 17 in the two preceding weeks, rose again last week to 25, but were 22 below the corrected average; 3 (including 2 hospital cases admitted from 18, Bremen Street) belonged to Hackney, 4 to Bethnal Green, 3 to Mile End Old Town, 2 to Poplar, and 2 to Newington sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 793 scarlet fever patients, against numbers declining in the five preceding weeks from 980 to 880; 47 cases were admitted during the week, against 96, 79, and 76 in the three previous weeks. The fatal cases of *diphtheria*, which had been 35 and 39 in the two previous weeks, were again 39 last week, and exceeded the corrected average by 19; 2 belonged to Paddington, 3 to Kensington, 4 to Hammersmith, 2 to Hackney, 3 to Bethnal Green, 6 to Lambeth, 3 to Wandsworth, and 3 to Camberwell sanitary areas. The 25 fatal cases of *whooping-cough* showed a further increase upon the low numbers in the two preceding weeks, but were 40 below the corrected average; 14 belonged to South London, including 5 to Camberwell sanitary area. The 16 deaths attributed to *diarrhœa* also showed an increase upon the low number in the previous week, and exceeded the corrected average by 2.

The deaths referred to *enteric fever*, which had been 11, 12, and 18 in the three previous weeks, declined again last week to 12, and were 9 below the corrected average; 2 belonged to Hammersmith, and 2 to Lambeth sanitary areas. The Metropolitan Asylum Hospitals contained 75 cases of enteric fever, and not one of typhus on Saturday last; 6 cases of enteric fever were admitted during the week, against numbers declining from 11 to 5 in the four preceding weeks.

The deaths referred to diseases of the respiratory organs, which had been 258, 277, and 330 in the three preceding weeks further rose to 440, but were 86 below the corrected average.

Different forms of violence caused 81 deaths; 72 were the result of negligence or accident, among which were 25 from fractures and contusions, 12 from burns and scalds, 3 from poison, and 22 of infants under one year of age from suffocation. The 25 deaths from fractures and contusions were thus caused:—3 by accidents from vehicles in street; 3 by accidents on railways; 1 by kick from bullock; 1 by fall from roof; 1 by fall from window; 2 by fall into ship's hold; 2 (1 intoxicated) by fall down stairs; 1 by fall from bed; 1 by fall into pail; 1 by fall at birth; 3 (1 intoxicated) by fall, the nature of which was not stated; 1 by fall of floor; 1 by fall of wood; 1 by injury, the cause of which was not stated; and 3 by fracture, cause not stated. An inquest was held in each of these 25 cases except in 2 of the last 3. Eight cases of suicide were registered, the corrected average being 7.

A woman, described as an annuitant and the widow of a house painter, died on 16th instant in Chapter Terrace, Newington, her age being stated to be 100 years.

#### GREATHER LONDON.

In Greater London 3491 births and 2207 deaths were registered, corresponding to annual rates of 33·0 and 20·8 per 1000 of the estimated population. In the Outer Ring 20 deaths from measles, and 6 from diphtheria were registered. The fatal cases of measles included 7 in West Ham and 4 in Willesden sub-districts. Three deaths were referred to "fever" in Tottenham and 2 in Enfield sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·67 ins.; the highest reading was 30·32 ins. on Sunday morning, and the lowest 28·81 ins. on Saturday morning. The mean temperature of the air was 40°·4, and 0°·4 above the average in the corresponding weeks of the 20 years ending 1868. The mean was considerably below the average on Sunday, Monday, and Tuesday, but showed an excess during the remainder of the week. The direction of the *wind* was variable, and the horizontal movement of the air averaged 9·5 miles per hour, which was 3·4 miles below the average in the corresponding weeks of 16 years. *Rain* fell on two days of the week, to the aggregate amount of 0·13 of an inch. The duration of registered bright sunshine in the week was 6·2 hours, against 5·7 hours at Glynde Place, Lewes.

NOTE.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylums Hospitals, outside Registration London (see Table 5).

\* The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9.04 per cent. for increase of population.

† As the ten years average could not be correctly ascertained, the average for the six years 1882-7 has been used.

‡ These cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When the medical attendant does not certify that the disease is, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."

§ The violence at inquest is often used to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

TABLE 5. LONDON.—POPULATION; BIRTHS, DEATHS FROM ALL CAUSES, and from SMALL-POX, MEASLES, SCARLET FEVER, DIPHtheria, WHOOPING-COUGH, TYPHUS, ENTERIC (or Typhoid) FEVER, SIMPLE CONTINUED FEVER, DIARRHŒA, and VIOLENCE, during the Week ending

The height of the cistern of the barometer is 159 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and — "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford, and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are — E, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 29, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the civil day, or from midnight to midnight.

The reading of the barometer increased from 30.25 in. at the beginning of the week to 30.32 in. by the end of the week. The thermometer decreased to 55.91 in. by 4h. A.M. on Sat. and increased to 57.27 in. by the end of the week.

#### GENERAL REMARKS.

Overcast; foggy and gloomy.

Overcast; dense fog.

Generally overcast, with fog variable in density, till evening; variable afterwards.

Generally overcast; warmer.

Fine till evening, then overcast.

Showery in early morning; generally overcast afterwards, with occasional slight rain.

Showery in early morning; generally fine afterwards; slight rain in evening.

# WEEKLY RETURN OF BIRTHS AND DEATHS IN LONDON AND IN TWENTY-SEVEN OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,

AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 52. 1888. VOL. XLIX.] WEEK ENDING SATURDAY, DECEMBER 29. [Price 1½d.

General Register Office, Somerset House,  
31st December, 1888.

## TWENTY-EIGHT GREAT TOWNS.

The deaths registered last week in TWENTY-EIGHT GREAT TOWNS of England and Wales corresponded to an annual rate of 20·8 per 1000 of their aggregate population, which is estimated at \*9,398,273 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

| TOWNS.       | Weeks ending |             |             |             | TOWNS.             | Weeks ending |             |             |             |

| Huddersfield | 18·8         | 20·5        | 20·5        | 28·5        | Salford* -         | 18·0         | 18·0        | 23·3        | 22·4        |
| Hull -       | 14·7         | 14·2        | 18·1        | 12·9        | Sheffield -        | 17·8         | 18·0        | 19·9        | 24·3        |
| Leeds -      | 20·2         | 22·9        | 21·2        | 24·4        | Sunderland -       | 13·1         | 16·2        | 26·5        | 22·5        |
| Leicester* - | 22·0         | 16·7        | 23·5        | 17·1        | Wolverhampton -    | 16·6         | 16·6        | 33·8        | 27·5        |

The highest annual death-rates, measured by last week's mortality, were:— from *measles*, 1·8 in London, in Leicester, and in Bolton, 2·1 in Birkenhead, 2·2 in Leeds, 2·6 in Oldham, 2·9 in Cardiff, 3·7 in Salford, 3·9 in Liverpool, and 4·4 in Blackburn; from *scarlet fever*, 1·0 in Manchester, 1·4 in Bolton, 1·8 in Sheffield, and 2·2 in Blackburn; from *whooping-cough*, 1·1 in Nottingham, 1·2 in Sunderland, 1·6 in Birkenhead, and 2·5 in Preston; and from "*fever*," 1·1 in Huddersfield and 1·3 in Blackburn. The 56 deaths from *diphtheria* in the twenty-eight towns included 34 in London, 9 in Manchester, 3 in Liverpool, 3 in Salford, and 3 in Preston. *Small-pox* caused one death in Bradford, but not one in London or in any of the twenty-six other great towns.

### LONDON.

In LONDON† 1876 BIRTHS and 1641 DEATHS were registered. Allowing for increase of population, the births were 514, and the deaths 323, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 17·7 and 22·0 in the two previous weeks, declined again last week to 20·0. During the thirteen weeks ending last Saturday the death-rate averaged 18·9 per 1000, and was 2·1 below the mean rate in the corresponding periods of the ten years 1878–87.

\* The population of each of the 28 towns is estimated on the hypothesis that the rate of increase in the last intercensal period has been maintained since 1881. There are, however, reasons (derived from the numbers of inhabited houses on the rate books) to believe that by this method the populations of Leicester, Salford, and Bradford are over-estimated, and those of Newcastle-upon-Tyne and Cardiff under-estimated; if this be the case, it would follow that the death-rates given above for Leicester, Salford, and Bradford are under-stated, and those for Newcastle-upon-Tyne and Cardiff over-stated.

† Including the Strand Union Workhouse at Edmonston, the Holborn Union Workhouse at Mitcham, and the Metropolitan Asylum Hospitals outside Registration London.

The 1641 deaths included 147 from measles, 20 from scarlet fever, 34 from diphtheria, 28 from whooping-cough, 8 from enteric fever, 14 from diarrhoea and dysentery, and not one from small-pox, typhus, ill-defined forms of continued fever, or cholera; thus, 251 deaths were referred to these diseases, being one above the corrected average weekly number.

No death from *small-pox* was registered, the corrected average being 11. No small-pox patients were under treatment during the week in the Metropolitan Asylum Hospitals, and only one in the Highgate Small-pox Hospital. The fatal cases of *measles*, which had been 139, 154, and 184 in the three preceding weeks, declined again last week to 147, but exceeded the corrected average by 84; 8 belonged to Fulham, 9 to Islington, 14 to Hackney, 11 to Bethnal Green, 7 to Newington, 10 to Lambeth, 16 to Battersea, and 13 to Camberwell sanitary areas. The deaths from *scarlet fever*, which had been 17 and 25 in the two previous weeks, declined again last week to 20, and were 26 below the corrected average; 2 belonged to Islington, 2 to Hackney, 3 to Bethnal Green, 2 to Poplar, 2 to Newington, and 2 to Battersea sanitary areas. At the end of the week the Metropolitan Asylum and London Fever Hospitals contained 791 scarlet fever patients, against numbers declining in the six preceding weeks from 980 to 793; 44 cases were admitted during the week, against numbers declining from 96 to 47 in the four previous weeks. The fatal cases of *diphtheria*, which had been 39 in each of the two preceding weeks, declined last week to 34, but exceeded the corrected average by 15; 2 belonged to Kensington, 2 to Hammersmith, 2 to Westminster, 3 to Pancras, 3 to Islington, 2 to Bethnal Green, 2 to Whitechapel, 2 to Poplar, 4 to Lambeth, 2 to Battersea, and 2 to Wandsworth sanitary areas. The 28 fatal cases of *whooping-cough* showed a further slight increase upon the low numbers in recent weeks, but were 48 below the corrected average; 16 occurred in South London, of which 4 belonged to St. George Southwark, 4 to Lambeth, and 3 to Camberwell sanitary areas. The 14 deaths attributed to *diarrhoea* and *dysentery* were two below the number in the previous week, and corresponded with the corrected average.

The deaths referred to *enteric fever*, which had been 18 and 12 in the two previous weeks, further declined to 8 last week, and were 10 below the corrected average; 2 belonged to Islington sanitary area. The Metropolitan Asylum Hospitals contained 72 cases of enteric fever, and not one of typhus on Saturday last; 4 cases of enteric fever were admitted during the week, against 5 and 6 in the two preceding weeks.

The deaths referred to diseases of the respiratory organs, which had increased in the four preceding weeks from 258 to 440, declined last week to 412, and were 145 below the corrected average.

Different forms of violence caused 52 deaths; 48 were the result of negligence or accident, among which were 15 from fractures and contusions, 5 from burns and scalds, 5 from drowning, 1 of a tarpaulin maker from plumbism, and 21 of infants under one year of age from suffocation. The 15 deaths from fractures were thus caused:—4 by accidents from vehicles in street; 1 by accident on railway; 1 by fall in street; 4 by fall down stairs; 1 by fall in room; 1 by fall from window; 1 by fall into ship's hold; 1 by blow from crane; and 1 by fracture, the cause of which was not stated. An inquest was held in each of these 15 cases, except the last. Four cases of suicide were registered, the corrected average being 7.

#### GREATER LONDON.

In Greater London 2380 births and 2053 deaths were registered, corresponding to annual rates of 22·5 and 19·4 per 1000 of the estimated population. In the Outer Ring 17 deaths from measles, 9 from whooping-cough, and 5 from "fever" were registered. Seven deaths from measles and 2 from scarlet fever occurred in West Ham sub-district; and 2 deaths from "fever" were returned in Tottenham and in Enfield sub-districts.

#### METEOROLOGY.

At the Royal Observatory, Greenwich, the mean reading of the *barometer* last week was 29·51 ins.; the lowest reading was 29·27 ins. at the beginning of the week, and the highest 29·81 ins. at the end of the week. The mean temperature of the *air* was 42°·5, and 3°·4 above the average in the corresponding weeks of the 20 years ending 1868. The mean exceeded the average on each of the first six days of the week, but was slightly below the average on Saturday. The general direction of the *wind* was South-westerly, and the horizontal movement of the *air* averaged 14·0 miles per hour, which was 1·4 mile above the average in the corresponding weeks of 16 years. *Rain* fell on five days of the week, to the aggregate amount of 0·66 of an inch. The duration of registered bright sunshine in the week was 4·6 hours, against 3·4 hours at Glynde Place, Lewes.

Note.—The figures in this Table include deaths of London residents in the Strand and Holborn Union Workhouses, and in the Metropolitan Asylum Hospitals, outside Registration London (see Table 5).

\* The numbers in this column are the average weekly deaths for the ten years 1878-87, raised by 9·04 per cent. for increase of population.

† As the ten years average could not be correctly ascertained, the average for the six years 1832-7 has been used.

‡ Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated," which are so certified by registered medical men. When the medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered practitioner, the case is returned under the heading "no statement."

§ The evidence at inquest is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, manslaughter, or suicide. All such cases are classed under "accident or negligence."

The height of the eastern of the barometer is 39 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. The means of the observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the twenty years ending 1873 for the barometer, and during the twenty years ending 1868 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-metrical Tables.

The average temperature of the air is that derived from a discussion of the photographic records made at Greenwich during the 20 years ending 1888, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

In reading the columns 9 and 25 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The thermometers in the water of the Thames are suspended at a depth of two feet below the surface, at the end of one of the jetties of the Foreign Cattle Market at Deptford and their readings are registered by the Clerk of the Market, under instructions from the Corporation of London.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are +, -, P. positive; N. negative; v. weak; m. moderate; s. strong; and v. variable.

The numbers in column 29 derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The results of all the meteorological observations are to be understood as applying to the civil day, that of the barometer increased from 29.27 in. at the beginning of the week to 29.71 in. by 9h. P.M. on the 23d, decreased to 29.30 in. by 3h. P.M. on the 24th, increased to 29.50 in. by 9h. A.M. on the 25th, decreased to 29.43 in. by 9h. P.M. on the same day, increased to 29.70 in. by 9h. P.M. on the 26th, decreased to 29.41 in. by 9h. A.M. on the 27th, and increased to 29.51 in. by the end of the week.
